office patients need nutritional support

and Theragran gives therapeutic results

THERAGRAN
THERAPEUTIC FORMULA VITAMIN CAPSULES SQUIBB

Each Theragran Capsule supplies:

- Vitamin A .... 25,000 U.S.P. Units (synthetic)
- Vitamin D .... 1,000 U.S.P. Units
- Thiamine Mononitrate.... 10 mg.
- Riboflavin .................. 10 mg.
- Niacinamide ............... 150 mg.
- Ascorbic Acid ............. 150 mg.

1 or more capsules daily bottles of 30, 100 and 1000.
Contents

Differential Diagnosis of Internal Diseases

CLINICAL ANALYSIS AND SYNTHESIS OF SYMPTOMS AND SIGNS ON PATHOPHYSIOLOGIC BASIS

JULIUS BAUER, M.D., F.A.C.P. Clinical Professor of Medicine, College of Medical Evangelists, Los Angeles; Senior Attending Physician, Los Angeles County General Hospital; Consultant in Medicine, Long Beach Veterans Administration Hospital

PUBLISHED THIS month, the new edition of Dr. Bauer's highly recognized volume has now been thoroughly revised and enlarged to keep his unique approach to differential diagnosis up-to-date. Of the first edition the Annals of Internal Medicine said:

"...This book can be highly praised. The author has combined with his individual approach to each subject a large extraordinary display of knowledge...and there can be few living men who enjoy such evident familiarity with the medical literature of both continents...healthy attitudes pervade the well-written text, which is amply illustrated with numerous case reports...This book is an education to read and will remain an invaluable work of reference."

"Any rational therapy must be based upon and, therefore, be preceded by a diagnosis," says Dr. Bauer. He adds, "Differential diagnosis requires thoroughness in observation and examination of the patient, knowledge, experience and shrewdness." His broad concern with the whole patient, rather than simply extensive tabulation of clinical and laboratory data, provides a firm foundation for this type of informed approach. This new revision will prove invaluable to owners of the previous work as well as to new readers.

The Role of Algae and Plankton in Medicine

MORTON SCHWIMMER, M.D. and DAVID SCHWIMMER, M.D., F.A.C.P.

The first attempt to collate the vast amount of material concerned with the direct and indirect medical importance of algae and plankton. Not only are the obvious nutritional and toxicological aspects covered, but also the historical background and current concepts of direct physiological phenomena—with emphasis on medical application.

Of particular importance to the pathologist, toxicologist, nutritionist, neurologist, allergist, and the public health official, this new monograph will prove highly stimulating to every physician interested in this field of medicine and its application to his work.

Includes the most comprehensive bibliography and index anywhere available in the field, 96 pages, $3.75

WORTHY OF RECOMMENDATION...

Haematological Technique

for Medical Laboratory Technicians and Students

Darmady and Davenport supply in this new book a complete manual in which the haematology lab technician will find everything he needs to know to carry out his job efficiently and accurately. It is based on the solid foundation of practical experience in the management of a hematology laboratory.

While the chief stress is on the technical side of the work, a brief section on the fundamental mechanisms behind disease processes is included. When practicable, alternate methods are given, and a section on medical statistics will also be found useful. There is a glossary of terms, and a guide to further reading.

This is not only an excellent book to recommend to technicians, but junior pathologists and medical students will find it of practical assistance in orienting themselves in the field.

200 pp. 27 illus., 4 in color $3.00
Diagnostic Reagents
for the Determination of

**ANTISTREPTOLYSIN TITERS**

*Bacto-Streptolysin O Reagent* is a standardized reagent recommended as an aid in the diagnosis of Rheumatic Fever, Glomerulonephritis and other diseases associated with Group A streptococcal infections.

**SENSITIVITY TESTS**

The significance of determining bacterial sensitivity is accentuated by the discovery of increasing numbers of antibiotics, sulfonamides, and other chemo-therapeutic agents and the development of resistant organisms to one or more of these compounds. Sensitivity or resistance is easily determined with *Bacto-Sensitivity Disks*.

**HETEROPHILE ANTIBODIES**

The differential diagnosis of Infectious Mononucleosis requires the use of standardized heterophile reagents:

- *Bacto-Guinea Pig Kidney Antigen*, Desiccated and Suspension
- *Bacto-Beef Cell Antigen*, Desiccated and Suspension

**BLOOD COAGULATION**

Prothrombin determinations require accurately prepared interstandardized reagents:

<table>
<thead>
<tr>
<th>Bacto-Thromboplastin</th>
<th>Bacto-Globulin</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bacto-Prothrombin 2 Stage Reagent</td>
<td>Bacto-Sodium Chloride 0.85 Per Cent</td>
</tr>
<tr>
<td>Bacto-Prothrombin Free Beef Plasma</td>
<td>Bacto-Sodium Oxalate Solution 0.1 Molar</td>
</tr>
<tr>
<td>Bacto-Prothrombin Free Rabbit Plasma</td>
<td>Bacto-Calcium Chloride Solution 0.02 Molar</td>
</tr>
</tbody>
</table>

**LIVER DISEASE**

Differential diagnosis of hepatic disturbances is aided by standardized reagents:

- *Bacto-Cephalin Cholesterol Antigen*
- *Bacto-Phymol Turbidity Reagent*
- *Bacto-Kingsbury Turbidity Standards*
- *Bacto-Thromboplastin and other Prothrombin Reagents*

**RENAL FUNCTION**

*Phenolsulfonphthalein Ampules*, *Difco* is a carefully prepared injectable recommended for use in determining renal excretion rate.

**HEMAGGLUTINATION**

**OF RED BLOOD CELLS**

Accurately determined by the use of:

| Bacto-Trypsin 1% for Hemagglutination | Trypsin, *Difco*, 1:250 |
| Bacto-Hemagglutination Buffer | *Bacto-Bovine Albumin* 30% |
| Bacto-Phytohemagglutinin |

**Difco Laboratories**

**Detroit 1, Michigan**
from gravity blood flow to pressure administration—in 3 seconds

Plexitron
R48 expendable set

Now you can switch from gravity flow to pressure in 3 seconds... give a pint of blood in 4 to 5 minutes simply by squeezing flexible drip chamber. Rate of transfusion is controlled by force and frequency of squeeze action. Return to gravity flow at will. Unique safety valve makes it impossible to pump air.

built-in pressure pump cannot pump air
