three vials... one plasma... one result

The accuracy of Simplastin (specially prepared thromboplastin-calcium) is not only assured by standardization against normal plasma, but the plasma of patients on anticoagulant therapy as well. Ready for immediate use with only the addition of distilled water, Simplastin eliminates errors which may arise from frequent manipulation or addition of electrolytes of varying potency.

Your laboratory can test Simplastin without expense to confirm the rapid, reproducible results it affords in prothrombin time determinations. With the attached coupon you may obtain three 20-determination vials of Simplastin.

Test three Simplastin vials on the blood of one patient now on active anticoagulant therapy. Then repeat, using the same blood and three vials of any other thromboplastin (old-style or newer type). The results will speak for themselves.

For the laboratory, Simplastin saves valuable time and effort... for the clinician, it provides a dependable and accurate guide.

Supplied in boxes of 10: 6-determination or 20-determination vials.

THE PSYCHOSOMATIC GENESIS OF CORONARY ARTERY DISEASE

By DON CARLOS PEETE, M.D.

Associate Clinical Professor of Medicine Lecturer in the History of Medicine University of Kansas, School of Medicine

The purpose of this book is to show by use of historical facts from many sources, Biblical and Medical, how the evolution of our medical teaching suggests that after constant scientific search, the basic etiology is stress resulting from insecurity. It is the answer as to why science and religion are not incompatible. It shows the need of science for religion and religion for science.

Why We Became Doctors

Do you remember why? The recollections of 50 distinguished colleagues may stir your own memories—and this readable little volume is especially suitable for young people thinking of entering the profession. Fifty articulate men and women here reveal what inspired them to study their calling. Among the contributors are Drs. Frederic Loomis, Walter C. Alvarez, Walter B. Cannon, Somerset Maugham, and Albert Schweitzer. In explaining what drew their authors to medicine, these essays throw a good deal of light on its practice. ($3.75)

The Doctor Writes

This "Anthology of the Unusual in Current Medical Writing" will delight every medical man who hankers for that occasional article which is off the beaten path. From Sherlock Holmes as Dermatologist through Showmanship in Medical Teaching, the reader will find that each of these unique excursions into the unusual lives up to Editor Waife's criteria for selection: interest of subject, excellence of writing and, most of all, pleasure in reading. The book will grace the shelves of any library, medical or otherwise, provide many pleasant moments for the browser, and its receipt as a gift will be gratifying to any colleague. ($3.75)

GEORGE E. BURCH, M.D.

Of Publishing Scientific Papers

For every prospective article writer (and for publishers and editors of same as well), Dr. Burch's pointed little book provides a handy guide to what's done and what's not. Illustrated with as delightfully satiric a series of drawings as ever illuminated author's and publisher's predicament, it furnishes as well a number of solid, helpful suggestions, invaluable in the preparation of publishable manuscripts. make complete blood counts automatically
in 2 minutes or less!

Developed by a leading hematologist, the JAco Arithmometer makes possible the faster, more reliable blood count procedure you have long needed. Utilizing precision electronic circuits instead of the human eye, the Arithmometer works automatically—you merely insert blood sample, push a button and read your results on a large dial. Determinations are accurate to within 3% whether you are counting white cells or red cells. (Selection of element to be counted is made by panel switch and choice of solution in which cells are suspended.) "Checks", "repeats" and doubt about the validity of results are completely eliminated with the Arithmometer.
