BACTO-TRYPsin 1% for Hemagglutination

BACTO-HEMAGGLUTINATION BUFFER

The use of trypsinized red cells in Rh determinations has improved both the sensitivity and specificity of the test making the direct procedure as reliable as the more involved indirect antiglobulin tests. Trypsin treated erythrocytes favorably influence the determinations of the A, B, S, Lea, Leb and P factors as well as providing a more sensitive cell suspension for virus hemagglutination studies.

**Bacto-Trypsin 1% for Hemagglutination**

is a carefully standardized soluble Trypsin for conditioning erythrocytes for Rh determinations and other hemagglutination tests. Bacto-Trypsin 1% for Hemagglutination is reconstituted by the addition of Bacto-Hemagglutination Buffer solution, yielding a sparkingly clear solution equivalent in tryptic activity to a 1 per cent solution of Trypsin, Difco 1:250.

**Bacto-Hemagglutination Buffer**

rehydrated with distilled water is recommended for the preparation of isotonic buffered saline for use in hemagglutination studies, especially for reconstituting Bacto-Trypsin 1% for Hemagglutination and for suspending and washing erythrocytes preparatory for hemagglutination.

**These reagents** are supplied in companion packages containing 6 vials (10 mL) of Bacto-Trypsin 1% and 6 vials of Bacto-Hemagglutination Buffer each sufficient for preparing 1000 ml. of buffered saline.

DIFCO LABORATORIES
DETOIT 1, MICHIGAN
Five years ago most laboratories were still using other thromboplastins.

Today more than 80% have changed to Simplastin. Why?

Such changes are not made lightly.
Each laboratory had its reasons:

**Dependability** Simplastin's reproducibility from vial to vial and lot to lot is guaranteed. We make sure of reproducibility by rigidly controlling such factors as particle size and number, pH, ionic strength, moisture content, temperature stability. We standardize Simplastin against normal and dicumarolized plasmas, against whole and dilute Diagnostic Plasma Warner-Chilcott and against other lots of Simplastin. For accuracy in prothrombin-time determinations, the thromboplastin must give reproducible results. Simplastin always does.

**Purity** To laboratories that used to use liquid commercial thromboplastin preparations, this has been a significant consideration. (To stabilize thromboplastin in suspension, the manufacturer must use a preservative. Preservatives commonly used for this purpose are phenol (carbolic acid) and formaldehyde – both enzyme poisons that can make prothrombin times less reliable, especially with patients on anticoagulants.)

**Convenience** For laboratories that once made their own thromboplastin or extracted it from dried brain preparations, this has proved to be an important advantage. Adding water to Simplastin takes a lot less time and trouble than the do-it-yourself procedures—and you couldn't make a finer thromboplastin by any means.

**Economy** Thanks to the no-waste vials (6-, 20- or 50-determination size, to match your laboratory load), the skilled time saved by simple reconstitution, and the less frequent calls for “repeats”, many laboratories find that their cost per test is lower with Simplastin.

“It’s the standard” Simplastin has become the standard thromboplastin in most coagulation research laboratories, and wherever results must be readily comparable to those obtained in other laboratories. These are typical reasons why so many laboratories have changed to Simplastin. And why very, very few have changed again.

Like the finest product in any field, Simplastin is flattered by many imitators. They come and go. Even more gratifying is that year after year more and more laboratories, and more and more patients, benefit from our continuing efforts to make Simplastin the finest thromboplastin available.
NOTE TO CONTRIBUTORS

Papers are accepted for publication on condition that they contributed solely to this Journal. Manuscripts must be typewritten, double or triple spaced, on good quality bond paper with at least one inch margins, the original copy and one duplicate submitted (figures and tables should also be submitted, if possible, in duplicate). Handwritten manuscripts or excessive interlineation are unacceptable.

References to literature, both text and bibliography, should conform with this Journal's usage. Contributors are advised to examine issues of the Journal so that their manuscripts will conform to the Journal's style as to table and figure references, citations of the literature in the text, preferred spellings, abbreviations, and so forth.

Tables will be furnished without charge to the limit of one and one-half printed pages total, charts and illustrations in black and white to the limit of four. Excessive tables are charged for at approximately $20.00 per page, depending upon the type of material, and excessive illustrations are charged for at $10.00 each. The cost of colored illustrations in both articles and reprints must be borne by the contributors, and an estimate of such cost will be provided upon submission of the material.

Academic and/or hospital affiliations of each author, and an address for mailing proofs should be submitted with the article.

Reprints of articles will be furnished to contributors when ordered in advance. An order form, showing cost of reprints, is sent with proofs. BLOOD—The Journal of Hematology is published 12 times a year in two volumes.

Correspondence concerning business matters should be addressed to Grune & Stratton, Inc., Medical Publishers, 2130 South 17th St., Sheboygan, Wis., or 381 Park Avenue South, New York 16, N. Y. All communications concerning editorial matters should be addressed to Dr. William Dameshek, Harrison Ave. and Bennet St., Boston 11, Mass.

Subscription rates, $17.00 per year within the United States; foreign, $18.00 per year. Students, Fellows, Interns and Residents may receive a reduced subscription of $12.00 per year (a letter giving qualifying data must accompany such orders). Single copies $2.25, foreign $2.75. Supplementary issues sold at special prices obtainable on request. Subscriptions are accepted on a calendar year basis.

Changes of address notices, including both the subscriber's old and new address, should be sent at least one month in advance to the Publishers, Grune & Stratton, Inc., 381 Park Avenue South, New York 16, N. Y.

Published monthly at 2130 South 17th St., Sheboygan, Wis. Second class postage paid at Sheboygan, Wisconsin.

PROGRESS IN MEDICAL GENETICS
VOLUME II, 1962

Edited by ARTHUR G. STEINBERG, Ph.D., Professor of Biology, Department of Biology, and Associate Professor of Human Genetics, Department of Preventive Medicine, Western Reserve University, Cleveland, Ohio; and ALEXANDER G. BEARN, M.D., Associate Professor, The Rockefeller Institute; Physician, Hospital of the Rockefeller Institute, New York

A series designed to supply the practitioner and the clinician alike with easily assimilated reviews of significant current findings in the wide areas of medical genetics. "... authoritative and comprehensive ... enormously useful guides through the rapid developments and voluminous literature of recent years. This and the volumes projected for the future will undoubtedly prove useful additions to the medical genetics literature."—Ann. Int. Med.

One donor twin was PLASMAPHERESED...

with a new Fenwal* single phlebotomy PLASMAPHERESIS BLOOD-PACK™ unit. His annual plasma yield—more than six times the average—was comfortably and safely obtained. This exclusive Fenwal PLASMAPHERESIS system is a practical and simple procedure for both blood banks and donors...permits collection of whole blood, separation of plasma and return of the red cells to the donor with only one phlebotomy.

In addition, the Fenwal PLASMAPHERESIS system is further safeguarded by the exclusive matching-numbers method for positive red cell identification with the donor.

Write for additional detailed information.

An Announcement . . .

To mark the start of a new year of publication, the Editors of METABOLISM are happy to announce a new policy: timely and practically written Review Papers.

A sampling of some of the topics already scheduled for publication in 1963 are:

- Leucine hypoglycemia
- Diagnosis of Cushing's Syndrome
- Hypertension
- Modes of action of insulin and adrenalin on metabolic reactions
- Oxidative energy exchange
- Estimation of adrenal cortical function
- Biosynthetic pathways in steroid hormone metabolism
- Formation of urinary calculi
- Thyroxine binding proteins
- Steroid diabetes
- Diagnosis and treatment of hyperparathyroidism
- Tests for diabetes insipidus
- Hematology and metabolism in the red cell
- Interrelationship of gout and kidney.

These surveys feature current status of research and practice in specific metabolic disorders, critical evaluations of significant work, applicable conclusions for the busy reader. “Letters” reporting on important developments in countries all around the world will also provide an international image of metabolic studies. An early issue will present a valuable series of papers dealing with current pharmacologic advances in the management of diabetes.

Now is the time for you to enter your subscription to METABOLISM by simply completing and returning the order card below.

Second Revised Enlarged Edition

The Hemorrhagic Disorders

A Clinical and Therapeutic Approach

MARIO STEFANINI, M.D. and WILLIAM DAMESHEK, M.D.

Seven years have passed since the publication of the first edition of this volume, which has received wide acclaim in its field—

"The authors . . . have succeeded in presenting all factors involved in the complex mechanisms responsible for abnormal bleeding . . . in a class by itself . . . one of the best available." J.A.M.A.

"It gives . . . a clear exposition of the clinical situation today in the field of hemorrhagic diseases, and what is even more important, the practical rules to follow for the treatment . . . a real contribution for the clinician . . ." Ann. Int. Med.

Since that time, however, significant advances have been made in the study of hemorrhagic disorders—thus justifying a review of the standard body of data, its correlation with new findings and a discussion of new hypotheses.

The main purpose of this volume remains the same: to convey and interpret practical information to the clinician, pathologist and to the investigator. Built on a large number of cases, this study is complete and definitive, with many illustrations (some in color) and charts, together with practical laboratory details where possible.

All of the aspects of abnormal bleeding are systematically covered in 12 major sections. Extensive revisions have been made in all of the chapters—especially in such areas as the hemostatic process, the role of the vascular wall in hemostasis, prolonged bleeding, fibrinogenopenia, bleeding in surgery, and idiopathic thrombocytopenic purpura. An appendix gives a down-to-earth discussion about techniques of study of the bleeding patient. The exhaustive bibliography includes more than fifteen hundred carefully culled entries.

614 pages 241 illustrations (43 in color) $21.50

Guaranteed Reliability* of BLOOD pH MEASUREMENTS

With the new Model 135, pH-mV Electrometer . . . an accurate, simple-to-use, direct-reading instrument designed for reliable pH analysis.

Exclusive DELTA-matic® control allows the operator to select and expand any one pH unit full scale. Measurements are repeatable within ± 0.003 pH and readable to ±0.001 pH.

In addition, the Model 135 features simplified operation . . . two pH scales (0-14) and ΔpH (any one pH unit full scale) . . . two mV ranges (0 to +1400) and (0 to −1400) . . . input impedance 10¹³ ohms . . . offset current 10⁻¹³ amps . . . transistorized circuitry . . . chopper stabilized amplifier . . . 1.0 milliamp recorder output . . . $595.00, FOB Boston. Complete Blood pH Systems from $1,095.00.

*MEETER UNCONDITIONALLY GUARANTEED FOR ONE YEAR.

Corrects iron deficiency anemia quickly!

WELL TOLERATED—CAN BE TAKEN BETWEEN MEALS FOR OPTIMAL ABSORPTION

Ferronord, ion-protected iron, is quickly absorbed and excellently tolerated. So well tolerated, it may be taken between meals even by patients previously intolerant to iron therapy.

Supplied: Ferronord Tablets, bottles of 100. Ferronord Liquid, 60 cc. bottles with calibrated dropper.

Formula: Each Ferronord tablet or cc. contains ferrous iron, 40 mg., as iron-amino acid complex.

Have you read:

**The American Journal of Human Genetics**
*Editor: C. Nash Herndon, M.D.—$10 a year ($11 outside U.S.A.)—quarterly*
Official Journal of the American Society of Human Genetics. A source of authoritative information on the latest clinical and investigative advances of medical (human) genetics. Articles by leading authorities for both practitioner and researcher with prime emphasis on practical material.

**Arthritis and Rheumatism**
*Editor: William S. Clark, M.D.—$10 a year ($11 outside U.S.A.)—bimonthly*
Official Journal of the American Rheumatism Association. Keeps the physician concerned with rheumatic disorders and joint and connective tissue diseases informed of latest advances. Of vital importance for the rheumatic, orthopedic and geriatric specialties—and for research.

**Clinical Research**
*Editor: Morton D. Bogdonoff, M.D.—$8 a year ($9 outside U.S.A.)—quarterly*
Official Publication of the American Federation for Clinical Research. Stimulating and informative, provides advance reports of investigations in a variety of fields. Concise, accurate reports are usually published prior to presentation at meetings.

**Comprehensive Psychiatry**
*Editor: Fritz A. Freyhan, M.D.—$10 a year ($11 outside U.S.A.)—bimonthly*
Official Journal of the American Psychopathological Association. Provides a forum for clinicians and investigators of markedly divergent concepts, methods and orientations. Clear, concise reports cover new developments in clinical and basic investigations as well as new diagnostic and therapeutic practices.

**Metabolism, Clinical and Experimental**
*Editor: Garfield G. Duncan, M.D.—$15 a year ($16 outside U.S.A.)—monthly*
A leader in its field, providing specialist and research worker with clear, usable information on metabolic diseases and phenomena: nutrition, endocrines, genetics, gout, dystrophies and diabetes.

**Progress in Cardiovascular Diseases**
*Editor: Charles K. Friedberg, M.D.—$10 a year ($11 outside U.S.A.)—bimonthly*
For the man in practice—internist or cardiologist—who sees the heart patient first. Each issue presents a symposium-in-depth on one major topic resulting in a practical working library of detailed, up-to-date information.
AUTOMATIC ELECTROLYTES

From one sample of 0.3 ml., four tests...

are AutoAnalyzer® reported*

in FOUR minutes

It's intriguing, a single machine... a standard Technicon® AutoAnalyzer, plus a flame unit, colorimeter, three recorders and “voila”... four Electrolytic constituents are reported simultaneously in four minutes of specimen receipt.

Only one 0.3 ml. specimen is required for all four analyses. Furthermore, running consecutively, 40 electrolytes may be determined in one hour... without attention too... with the same high degree of accuracy as any one other AutoAnalyzer test.

What's more, double-analyses set-ups such as: Glucose/BUN, Chloride/CO₂, Sodium/Potassium and any single analysis can be performed routinely on the Electrolyte AutoAnalyzer.

*Four discrete written records are presented.
