Blood Component Therapy

with the SORVALL RC-3

General-Purpose Automatic Refrigerated Centrifuge

No longer must transfusions be in the form of whole blood only. Today, it is entirely feasible for even small blood banks to supply specific products for anemia, hemophilia, thrombocytopenia, etc. — all from one unit of blood.

One of the most important areas in which the RC-3 is demonstrating its superiority is in the separation of blood components. No other instrument available so dramatically reduces blood processing times as does the RC-3. Centrifuging operations that once took as much as thirty minutes to complete may now be performed within seven minutes or less. Write for Bulletin BL-88CT.
MODERN PRACTICES IN TRANSFUSION THERAPY

Lectures, Demonstrations, and Informal Discussions

Mount Sinai—Michael Reese Blood Centers and Visiting Faculty
October 3–4, 1966

Donor selection and care, modern blood processing techniques, pre-transfusion testing in routine and special cases. Advances in pre-natal testing. Automation, plasmapheresis, blood component therapy, and deep freeze storage.

Course limited to 50 physicians. Fee—$50.00

Diagnostic Laboratory
Hematology

GEORGE E. CARTWRIGHT, M.D.

"... This concise and compact little manual is worth its weight in gold. It can be useful to the student of medicine, medical technologist, or physician. The latest advances in hematology including electrophoresis, coagulation, and other problems are dealt with in brief and authoritative form. The book is highly recommended..."—New York State Journal of Medicine

352 pages, 66 illus., $8.75

We know you devote a lot of time and effort to the Coombs test. So do we. After all, it's probably the most important contribution to blood banking since the discovery of the Rh system.

It's worth "sweating blood" over.

This explains our constant effort to make the best possible Coombs Serum. Our research and production people want what you want—a highly sensitive reagent assuring broad range antibody coverage, but one that won't react with non-specific extraneous factors.

We've succeeded. Look at the superior performance of Pfizer Coombs Serum in the discovery or confirmation of 10 new antibodies or antigens, and its record in day to day laboratory tests of detecting at least 40 different antibodies. But technologists throughout the U.S. provide even more convincing evidence of its fine quality. They currently use about 2½ times as much Pfizer Coombs Serum as they did 3 years ago.

We're still working at it...still trying to make an even better Pfizer Coombs Serum for your use in your laboratory. We still sweat blood.

Pfizer Coombs Serum
