NEW LEUCODIFF™ RECORDER CUTS YOUR DIFFERENTIAL COUNTING TIME BY 30%.

YOU CAN SAVE enough time over manual methods to pay the $425 cost in a few months. Reasons for Leucodiff speed and accuracy:
Fine adjustment of microscope is handled by thumb-operated remote control wheel on keyboard. Quick-depress keys arranged in order of cell frequency; operation becomes fast reflex action. Read-easy display panel shows percentages of cells in order of occurrence in Schilling count. Tally stops automatically when pre-set total (1 to 999) is reached. The Leucodiff Recorder fits any microscope, can be operated by right hand or left. Three kinds of counts possible: differential, thrombocyte-erythrocyte and reticulocyte-erythrocyte ratios. More about the time-saving Leucodiff Differential Recorder in Product Bulletin 6-247-10. Write Fisher Scientific Company, 176 Fisher Building, Pittsburgh, Pennsylvania 15219.

IMPORTANT BOOKS FOR THE HEMATOLOGIST

from LITTLE, BROWN

1. HEMORRHAGE AND THROMBOSIS: A Practical Guide

By EDWIN W. SALZMAN, M.D., and ANTHONY BRITTEN, M.D.

This volume offers authoritative, straightforward discussions of the basic pathophysiological mechanisms involved in hemorrhagic diseases and of the management of such practical problems as the bleeding hemophiliacs, the postoperative pulmonary embolism, the preoperative patient who may be a "bleeder," or the surgical patient who bleeds excessively for no apparent reason. 257 pages, illustrated. $10.00

2. COAGULATION AND TRANSFUSION IN CLINICAL MEDICINE

By SHIRLEY A. JOHNSON, Ph.D., and TIBOR J. GREENWALT, M.D.

This important book for the clinician sets out to define the bleeding disorders that accompany or underlie disturbances of the coagulation mechanism. Chapters deal with the principles of blood coagulation and transfusion therapy, diagnosis and management of the hemophiliacs and other congenital coagulation disorders, platelet alterations, bleeding states that complicate liver disease, pregnancy, perinatal life, massive transfusions, and the use of anticoagulants. 203 pages, illustrated. $9.50

3. IRON METABOLISM

By THOMAS H. BOTHWELL, M.D., and CLEMENT A. FINCH, M.D.

"This comprehensive book is the authors' attempt to integrate the physiology of iron metabolism with the pathologic conditions of iron lack and iron overload. Both Dr. Bothwell and Dr. Finch are well qualified for the task. The book is well written and printed on excellent paper, which make the reader's task easier. . . . The bibliography of 1,463 references will be of great use. The section on iron overload, however, should be read by every physician or student who wants a better understanding of the problems of differential diagnosis between hemosiderosis and hemochromatosism." — Circulation 440 pages, illustrated. $15.00

4. THE VEINS: Normal and Abnormal Function

By J. EDWIN WOOD, M.D.

The author's threefold purpose is to describe the function and measurement of the veins as capacity vessels of circulation; the effect of various normal stimuli on circulation; and the responses of peripheral veins to certain clinical conditions in which the veins are especially important. Also included is new information on pregnancy and the effect of oral contraceptives on the veins. 224 pages, illustrated. $10.00

5. RADIOISOTOPEs AND CIRCULATION

Edited by GUNNAR SEVELIUS, M.D., with 16 contributing authors.

This book critically reviews current radioisotope techniques and interrelates some basic concepts of physics and physiology to show the theory behind the use of radioisotopes. 17 authorities cover such topics as instrumentation, data interpretation, regional blood volume measurements, cardiac output, and coronary, renal, and liver blood flow. 307 pages, illustrated. $13.00

NOW, the Second, Revised

LEUKEMIA

By William Dameshek, M.D., and
Frederick Gunz, M.D., Ph.D.

This new report on a subject of increasing clinical importance explores many of the new findings in hematology that affect leukemia. It remains the definitive work for today’s practitioner. Said Lancet of the first edition: “. . . a superb job . . . this book is a classic work.”

608 pp., 202 illus., plus 4 color plates, $25.00

Why Miss Day thinks COREX® pipets are “tremendous”

From February to July this year, she kept records on pipet breakage in her lab, where from 1,200 to 1,300 pipets are used in a day.

She began with 1,129 pipets—869 borosilicate, 260 COREX pipets.

At the end of six months, 455 of the conventional pipets were broken, but only 32 COREX pipets had failed.

“This is tremendous,” Miss Day reports.

The longer life of COREX pipets promises marked savings in replacement costs. Miss Day figures her potential savings are at least one-third, believes that estimate could be low. Had all the pipets in her six-month study been COREX pipets, she knows she could have saved $320.

Miss Day is just as impressed by COREX centrifuge tubes. She put 130 plain 15-mI tubes in service in February, has lost only 25 of them. In the same time, she says, losses of borosilicate tubes would have been more than 70.

Miss Day has recommended COREXware to her associates. Shouldn’t you put it to work for longer life and savings in your lab?

Call your CORNING labware supplier for fast delivery on the complete line of COREX serological, Mohr, and transfer pipets, and COREX high- and low-speed centrifuge tubes and bottles.

Recent research and clinical developments in the immunopathology of malignancy are presented in this new book in a series said by J.A.M.A. to be "indispensable to all who want to keep up with this rapidly growing field."

IMMUNOPATHOLOGY
IVth International Symposium

Edited by Prof. Dr. PIERRE GRABAR and PETER A. MIESCHER, M.D.

Sponsored by the World Health Organization, the Council for International Organizations of Medical Sciences, and the National Foundation, this latest symposium was held at Monte Carlo in February, 1965. In this new book over eighty contributors present in thirty-six chapters grouped under the five main sections below, up-to-date information that makes this latest volume in the series as valuable as the previous one, of which Milit. Med. said: "This superb volume should be a must for every immunologist who wishes to keep abreast of the progress being made today."

Immunopathology has attracted a growing number of investigators; recent developments have occurred at such a rapid pace that after a lapse of only two years the need for another international symposium was felt. The immunopathology of malignancy was chosen as the main topic because of the growing importance of this field, where clinical tumor prophylaxis through immunization in man now appears within reach of future research.

I. Research on Tumor-Specific Antigens
II. Histocompatibility Antigens
III. Multiple Myeloma and Amyloidosis
IV. Immunopathology of Various Organs
V. Mechanisms of Immune Vasculitis

468 pages; copiously illustrated with microphotographs, tables, charts; fully indexed; $19.75

Also available, ed. by Prof. Dr. Pierre Grabar and Peter Miescher, M.D.:

1st Symposium Immunopathology, 520 pp., 179 illus., $16.50
2nd Symposium Mechanism of Cell and Tissue Damage Produced by Immune Reactions, 414 pp., 90 illus., $19.00
3rd Symposium Immunopathology, 389 pp., 213 illus., $18.50
The first Bovine Albumin specifically designed for blood group testing...

**ORTHO BOVINE ALBUMIN 22% SOLUTION**

An ideal suspending medium for compatibility testing and other blood bank procedures...prepared by unique, patented manufacturing processes under rigid quality control.

23 Bedford Sq., London, WC1

Why Mr. Wilkinson uses only COREX® serological pipets

Because they last.
"We have about 8,000 COREX cotton-mouth serological pipets of different sizes which we have bought over a two-year period," he reports. "We have a box in our glass washing room which contains only 12 broken COREX pipets."

This remarkable longevity has paid off in dependable serviceability for the 82 persons who staff this laboratory. Before COREX ware, pipet breakage at the mouth end—often undiscovered until the pipet was in the solution—caused annoyance and lost time. The even distribution of greater strength all the way through COREX pipets solved that problem.

Can COREX pipets solve problems for you, cut down on your pipet-replacement costs?

Find out. Order COREX serological, Mohr, and transfer pipets today from your CORNING labware supplier. He also can give you all the advantages of centrifuging in glass—right up to 40,000 x G—in COREX centrifuge tubes.

Progress in Clinical Pathology

A Review of Significant Advances in the Field of Clinical Pathology

Edited by MARIO STEFANINI, M.D., F.A.C.P.

The formidable task of keeping abreast of the rapid and diverse progress being made in the field of Clinical Pathology is made easier with the publication of this new volume. The first of a projected series, it brings to the fore important new perspectives, approaches, facts and methods not only in basic sciences but instrumentation and methodology as they affect the practice of Clinical Pathology and Medicine. A uniquely usable aid is the 54-page index—probably the most complete cross reference to the field available today.

CONTENTS

1. The Scope of Clinical Pathology, James N. Patterson
2. Normal Values from Results of Testing Patients' Specimens. Robert G. Hoffmann and Margaret E. Waid
4. Fluorometric Techniques in Clinical Pathology and Their Interpretation. R. E. Phillips and F. R. Elevitch
5. Progress in the Clinical Use of Radioisotopes, Oscar B. Hunter, Jr. and Francis H. Foekler, Jr.
6. Trace Elements and Clinical Pathology, D. D. Ulmer
7. Recent Practices in Diagnostic Bacteriology, Henry D. Isenberg and James I. Berkman
8. Enzymology: General Considerations; Serum a-Hydroxybutiric Dehydrogenase and Serum Guanase, Edwin M. Knights
10. Human Serum Lipoproteins: Advances in Physical and Chemical Methods of Isolation and Analysis, A. Scanu and J. L. Granda
11. Glycoproteins: Methods of Study of Changes in Health and Disease, Marvin R. Shetlar
12. Recent Advances in Diagnosis, Treatment and Prevention of Hemolytic Disease of the Newborn, E. R. Jennings
13. Microbiologic Diagnosis of Tuberculosis and Mycobacterioses, Ralph H. Hubble
14. The Screening of Newborn Infants for Hereditary Metabolic Defects, David Yi-Yung Hsia
15. Recent Advances in the Clinical Biochemistry of Diseases of Childhood, Donough O'Brien, Frank Ibbott and Denis Rodgerson

664 pp., 115 illus., $23.75
J.A.M.A. said: "... the excellent monograph of Stefanini and Dameshek... appears in a completely revised second edition. The text is increased by 60 per cent. Extensive additions in illustrations and bibliography round out a splendid and highly recommended presentation."

640 Pages · 241 illus., 43 in color · $21.50

Why Mr. Kolb says COREX® pipets give him "peace of mind"

"They've been used hundreds of times each, and we haven't lost a one. Using them gives me peace of mind."

Mr. Kolb's experience with COREX pipets goes all the way back to 1963 and pre-introduction field tests in his lab. "We had a high and favorable report on them," he said.

Sheer longevity isn't the only feature of COREX pipets that he likes, though. He appreciates their sharp and uniform graduations, their big and readable numerals, and the uniform flatness of their tops that makes pipetting go more surely and precisely.

COREX centrifuge tubes have earned his confidence, too. His lab uses high-speed and low-speed COREX tubes exclusively.

Can the rugged dependability of COREX pipets and tubes give you more peace of mind, save you dollars on replacement costs? Find out. Order today through your CORNING labware supplier.

TC CHROMOSOME MICROTEST KIT

Eliminates Venal Puncture and Blood Separation

For rapid culturing and analysis of leukocytes from peripheral blood or bone marrow of adults, infants and small animals.

Test requires only 2 or 3 drops of whole blood from finger, heel or ear. Culture can be set up in 5 minutes.

For larger blood samples, use TC Chromosome Culture Kit.

Superior preservative for unique, prolonged maintenance of cell integrity, viability and sensitivity...6% cell suspension—one a strongly reactive A₁, the other a potent B...affirms blood group as a recommended procedure of AABB.

ORTHODOGNOSTICS
Raritan, New Jersey
We know you devote a lot of time and effort to the Coombs test. So do we. After all, it's probably the most important contribution to blood banking since the discovery of the Rh system.

It's worth "sweating blood" over.

This explains our constant effort to make the best possible Coombs Serum. Our research and production people want what you want—a highly sensitive reagent assuring broad range antibody coverage, but one that won't react with non-specific extraneous factors.

We've succeeded. Look at the superior performance of Pfizer Coombs Serum in the discovery or confirmation of 10 new antibodies or antigens, and its record in day to day laboratory tests of detecting at least 40 different antibodies. But technologists throughout the U.S. provide even more convincing evidence of its fine quality. They currently use about 2½ times as much Pfizer Coombs Serum as they did 3 years ago.

We're still working at it... still trying to make an even better Pfizer Coombs Serum for your use in your laboratory. We still sweat blood.

Pfizer Coombs Serum
