Henry M. Stratton, Inc., publishes the following journals:

*Blood*—The Journal of Hematology (Monthly)
  Frederick Stohlman, Jr., Editor

*Comprehensive Psychiatry* (Bimonthly), Official Journal of the American Psychopathological Association
  Fritz A. Freyhan, Editor

*Journal of Pediatric Surgery* (Bimonthly), Official Journal of the Surgical Section of the American Academy of Pediatrics and the British Association of Paediatric Surgeons
  C. Everett Koop, Editor

*Metabolism—Clinical and Experimental* (Monthly)
  James B. Field, Editor

*Progress in Cardiovascular Diseases* (Bimonthly)
  Charles K. Friedberg, Editor

*Seminars in Arthritis and Rheumatism* (Quarterly)
  John H. Talbott, Editor

*Seminars in Drug Treatment* (Quarterly)
  Joseph R. DiPalma and Benjamin Calesnick, Editors

*Seminars in Hematology* (Quarterly)
  Peter A. Miescher and Ernst R. Jaffé, Editors

*Seminars in Nuclear Medicine* (Quarterly)
  Leonard M. Freeman and M. Donald Blaufox, Editors

*Seminars in Psychiatry* (Quarterly)
  Milton Greenblatt, Editor

*Seminars in Roentgenology* (Quarterly)
  Benjamin Felson, Editor

*Transplantation Proceedings* (Quarterly), An Official Publication of the Transplantation Society
  Felix T. Rapaport, Editor

BURROUGHS WELLCOME & CO. (U.S.A.) INC., Tuckahoe, N. Y.
seminars in drug treatment
Joseph R. Di Palma and Benjamin Calesnick, Editors • Each issue gives two major review articles (up to 50 pp. each) on one aspect of drug treatment of disease. 1971 Topics—Drug Treatment of Parkinsonism, Drug Treatment of Rheumatoid Arthritis, Drug Treatment of Anxiety and Depression, Drug Treatment of Headache. Quarterly, $17.50

seminars in nuclear medicine
Leonard M. Freeman and M. Donald Blafox, Editors • Each issue offers timely reviews on a single topic of current clinical significance. 1971 Topics—Radionuclide Studies of the Central Nervous System, Radionuclide Studies of the Lung, Diagnostic Radionuclide Studies of the Thyroid, Treatment of Thyroid Disease with Radionuclides. Quarterly, $17.50

comprehensive psychiatry
Fritz A. Freyhan, Editor • Provides a forum for clinicians and investigators of markedly divergent concepts, methods and orientations. Clear, concise reports cover new developments in clinical and basic investigations as well as new diagnostic and therapeutic practices. Bimonthly, $16.00

seminars in hematology
Peter A. Miescher and Ernst R. Jaffe, Editors • Each issue focuses on a single aspect of importance on the current status and results of new investigations in clinical hematology and its related fields. 1971 Topics—Coagulation (in two parts), Hematology and Infections, Hereditary Enzymatic Deficiencies of Erythrocytes. Quarterly, $16.00

seminars in arthritis and rheumatism
John H. Talbott, Editor • Each issue offers in-depth reviews on a single topic on the understanding and treatment of patients with disorders in this field. 1971 Topics—Surgical Treatment, Connective Tissue Diseases, Gout and Uric Acid, Immunologic Aspects. Quarterly, $17.50

metabolism clinical and experimental
James B. Field, Editor • Presents practical information on metabolic processes and diseases in the areas of nutrition, endocrines, genetics, dystrophies, diabetes and gout. Monthly, $22.00

seminars in roentgenology
Benjamin Felson, Editor • Each issue emphasizes one aspect of the pathological and clinical aspects of roentgenology and new roentgenographic findings and their interpretation. 1971 Topics—A Primer on Cerebral Angiography, Localized Lesions of the Stomach, Infections of the Urinary Tract, The Jaws. Quarterly, $19.50

blood
Frederick Stohlman, Jr., Editor • An authoritative and principal source for the latest information on new investigative findings and clinical methods. Monthly, $26.50

journal of pediatric surgery
C. Everett Koop, Editor, and Stephen L. Gans, Associate Editor • For pediatricians, surgeons, family doctors and urologists. Stresses surgical care through physiology, pathology, surgical technique and by attention to the unique emotional and physical needs of the young patient. Bimonthly, $17.50

progress in cardiovascular diseases
Charles K. Friedberg, Editor • Each issue is a highly readable symposium on one aspect of cardiology. 1971 Topics Include—Current Problems in Acute Myocardial Infarction and Sudden Death, Pathophysiology and Differential Diagnosis. Bi-monthly, $18.50

transplantation proceedings
Felix T. Rapaport, Editor • Offers the proceedings of seminars held by the Transplantation Society as well as in-depth reviews on pressing problems in transplantation biology and medicine. 1971 Topics—Proceedings of the Third International Congress, Tissue Typing, Cancer and Histocompatibility, Artificial Organs. Quarterly, $25.00
Instructions for Contributors

General Information
Papers are accepted for consideration on the condition that they are contributed solely to this journal. Papers reporting human experimentation will be reviewed in accordance with the precepts established in the Helsinki Declaration. Copies of this declaration may be obtained by writing to the American Medical Association, 535 North Dearborn Street, Chicago, Illinois. Manuscripts and all communications concerning editorial matters should be addressed to Frederick Stohlman, Jr., M.D., St. Elizabeth's Hospital, 736 Cambridge Street, Brighton, Massachusetts 02135.

Manuscripts
Manuscripts must be typewritten, in good English, double or triple-spaced on good quality paper with margins of at least one inch. The original and one complete copy of the manuscript must be submitted.

First Page
The first page of the manuscript should contain the following information:
(1) Title of the paper
(2) Authors' names
(3) Authors' affiliations
(4) Name of the institution in which the work was done
(5) Acknowledgments for research support which the authors wish to have published.
(6) Name and address of the authors to whom communications regarding the manuscript should be directed.

Abstract
The second page should contain an abstract which, in general, should be less than 200 words. The abstract should summarize the reason for the study, the methods used, the results, and the major conclusions. Do not include a summary at the end of the paper.

The remainder of the manuscript should be written as concisely as possible. Only essential references should be cited.

Tables and Illustrations
Tables and illustrations should be critically evaluated so that information contained therein is not duplicated. Only those which are essential for a clear presentation of the data should be included.

Each table should be typed on a separate sheet and appropriately numbered. Legends should be typed on the same sheets as the tables.

Diagrams, charts and other line drawings should be submitted as glossy, black-and-white photographs. These must be submitted in duplicate, but clearly legible copies may be used with the duplicate manuscript. Lettering, symbols, lines, and strippings must be clear and distinct, and the effect of possible reduction in size to fit the printed page should be considered. Each figure must be identified by number and author's name written lightly with pencil on the back, and the top of the illustration should be indicated.

Photomicrographs and other photographic illustrations must be submitted in duplicate; copies are not acceptable.

Legends for illustrations should be typewritten, double-spaced, on a separate sheet.

Tables in excess of one and one-half printed pages total will be charged for at approximately $80.00 per page. Illustrations in excess of four are charged for at $25.00 each. The cost of colored illustrations in both articles and reprints must be borne by the contributor, and an estimate of such cost will be provided by the publisher after acceptance of the material.

References
References should be compiled numerically according to the order of citation in the text. They should be typewritten, double-spaced under the heading REFERENCES. See examples below. Note use of the paragraph indentation. Do not underline or use all capitals. Use initials for the names of cited authors rather than full first names. The abbreviation, "et al.", is permitted in text but not in lists of references.

Abbreviations for titles of medical periodicals should conform to those used in Index Medicus. (A "List of Journals Indexed in Index Medicus"—with abbreviations—is obtainable from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, at a modest charge.) Note that BLOOD uses periods for such abbreviations. Abbreviate publishers' names by elimination of their initials and such designations as "Company, Inc., Bros., Ltd."

If the original language of a foreign-language title uses other than the Roman alphabet, give the title in English, followed by a parenthetical note—e.g. (in Russian). Other foreign-language titles should be given in the original language.

In the examples below note the order of material, style of punctuation, the different use of capital letters for book and journal literature, and the use of Ed. (editor) and ed. (edition).

Before submitting the final draft, check the numbering and spelling of authors' names in the list of References against the form used in the text.

   (Continued on reverse side)

JOURNAL ARTICLE (cite only first page of article, not inclusive pages):

CONTRIBUTION TO BOOK (note handling of “Editors” and “Volume”):

PROOFREADING
Contributors are provided with galley proofs and are asked to proofread them for typesetting errors. Important changes in data are allowed within reason without cost, but excessive alterations and additions must be charged to the contributor.

LETTERS TO THE EDITOR
Letters to the Editor are welcomed and will be published if appropriate. They should be typewritten double-spaced and, generally, should not be more than 2 typewritten pages in length.

ANNOUNCEMENTS
Announcements of meetings, conferences and the like which are of interest to the readership of Blood should be sent to the Editor at least 8 weeks before the first day of the month of issue. These items should be as concise as possible.

Talks About His New Book,
RED CELL METABOLISM:
A MANUAL OF BIOCHEMICAL METHODS

"In the past 15 years, there has been a tremendous increase in our knowledge of red blood cell metabolism. . . . The clinician, the physiologist, the geneticist, and the biochemist have all found the red cell to be a valuable tool in the expansion of knowledge in their disciplines. An increasing number of laboratories have therefore found it desirable to measure the activity of red cell enzymes or metabolic intermediates. Their task has not always been an easy one, since in many instances methods for the study of the particular substance in the red blood cell have not been published. Often, methods have been hastily adopted . . . sometimes with unfortunate results.

"From a practical point of view, another annoying difficulty often presents itself. Each technique . . . requires the use of a different buffer for each enzyme assay, a different concentration of coenzymes and cofactors, and often a different final assay volume. Thus, performing several enzyme assays involves the vexing task of preparing many solutions where a few would suffice, preparing a different hemolysate for each assay, and setting up different calculations after each determination has been carried out.

"Over the past decade, with the help of many unusually able laboratory assistants and professional colleagues, we have devised a number of methods for the study of red cell enzymes and intermediates. These methods are, in general, based on well-known principles . . . We have used the same buffer substrate and cofactor solutions whenever possible. Most of the enzyme assays have been carried out on the same hemolysate, and, in most instances, the final assay volume is 1.00 ml.

"This manual represents a compilation of those techniques actively used in our own laboratory. It does not attempt to present several alternative methods . . . but we believe that the methods we are presenting will be . . . reliable, reproducible, and specific."

(If you're not interested in RBC or WBC osmotic fragility or Platelet Aggregation)

In just 3½ minutes, the Fragiligraph records and measures the fragility of erythrocytes. In just 7 minutes, the Fragiligraph records and measures the fragility of leukocytes. Additionally, an adaptor is being made available which determines platelet aggregation—eliminating the need for a separate costly instrument for this procedure alone. All completely automatic, all measured in minutes, all read at a glance. And all in one instrument, the Fragiligraph.

In present use at an impressive array of clinical and research centers, the Fragiligraph is now recognized as a valued adjunct in such broad spectrum areas as: Blood Preservation and Survival, Pediatrics, Oncology; Radiation, Pressurization, Kidney Dialysis; Mechanical Trauma and Toxicological Studies, among others.

For elaborated details on the above, write to us and receive all 35 of the published current literature.

Unless you’re not interested in rapid automated tests for RBC or WBC osmotic fragility. Or platelet aggregation. And haven’t read this ad.

Coombs Test standardization — that’s what! The SORVALL CW-1/AF-1 Cell Washing System takes your normal manual procedures and automates them with sure accuracy so that results may be duplicated with confidence no matter where the tests are run. The CW-1/AF-1 combination accepts twelve standard tubes, gives you four wash cycles at the turn of a control, fills and decants automatically, is simple to operate and compact. Ask for details. Ivan Sorvall, Inc., Norwalk, Connecticut, 06856.

SORVALL®
No time for variables

Your day is too busy...and you have too many important responsibilities to be concerned with variations in centrifugation and incubation time...or number of drops per test. ORTHO Reagents and Procedures consider both the test and the tester. They eliminate the variables with one standard procedure for ABO Grouping, Rh Typing, Screening and Crossmatching. They consistently ensure highly avid reactions. They complement your training and skills...the key to successful transfusion therapy.
