The large doses of liver extract needed for rapid response in pernicious anemia can be injected in small volume with Campolon Forte, containing 15 U. S. P. units in 1 cc. The daily administration of 1 cc. by intramuscular injection often produces a dramatic response within three or four days. The average maintenance dose is 1 cc. every seven to fourteen days.

Ampuls of 1 cc., boxes of 3, vials of 5 cc. and 10 cc. (15 U. S. P. units in 1 cc.)

45% greater capacity... at lowest cost per slide

plus these exclusive "LAB-AID" features...

- EFFICIENCY... slides, in single bank drawers, are easily inserted or withdrawn
- VISIBILITY... single rows offer unobstructed visibility
- COMPACTNESS... requires only nineteen-inch square floor or desk space
- FLEXIBILITY... interchangeable drawers file microslides, transparencies, lantern-slides, index cards.
- CONVERTIBILITY... drawers quickly changed from spaced filing to close-packed storage, or vice versa,
- "SPRING-ACTION"... flexible separators for spaced filing
- SAFETY... slides can't be chipped in pulling out drawers: safety stop prevents accidental full withdrawal: all-steel fire-resistant construction
- SMOOTH OPERATION... drawers won't stick or warp: slide freely on metal tracks
- EASY STACKING... interlocking units permit stable stacking to any convenient height
- ALL-STEEL CONSTRUCTION... welded steel throughout: great strength with minimum waste space
- ECONOMY... storage cost per slide lowest ever!

BLOOD
The Journal of Hematology

Note to Contributors

Papers are accepted for publication on condition that they are contributed solely to this journal. Manuscripts must be typewritten, double or triple spaced, on good quality bond paper with at least one inch margins, and the original copy submitted in English. References to literature should be made in conformance with American Medical Association usage. Tables should be as brief as possible. Charts and illustrations in black and white will be furnished without charge to the limit of four. A schedule of charges for excessive tables and figures is available on request. The excess in cost of colored illustrations must be borne by the contributors. If important changes in data are necessary on proof, a limited number are allowed without cost, but excessive alterations and additions must be charged to the contributors. University and hospital affiliations of each author, and an address for mailing proofs, should be submitted with the article.

Reprints of articles will be furnished to contributors when ordered in advance. A label showing cost of reprints, with an order, is sent with proofs. BLOOD—the Journal of Hematology is published monthly.

Correspondence concerning business matters should be addressed to Grune & Stratton, Inc., Medical Publishers, 581 4th Ave., New York 16, N. Y. All communications concerning editorial matters should be addressed to Dr. William Dameshek, 30 Bennet St., Boston 11, Mass.

Subscription rates, $13.00 per year within the United States; foreign, $13.00 per year; to holders of Internships, Residencies and Fellowships within the United States, $9.00 per year. Single copies $3.00, foreign $5.50.

Published monthly at Mount Royal & Guilford Avenues, Baltimore, Md. Entered as second-class matter January 2, 1946, at the Post Office at Baltimore, Maryland, under the Act of March 3, 1879.

PAPERS TO APPEAR IN EARLY ISSUES

Extramedullary Blood Production, by Claus Munk Plum.

Bone Marrow Nutrition in Relation to the Phagocytic Activity of Blood Granulocytes, by Clarence A. Mills.

Familial Panmyelophthisis, by Karl Rohr.

Some Observations on the Effect of Folic Acid Antagonism on Acute Leukemia and other Forms of Incurable Cancer, by Sidney Farber.
LIAFON supplies four blood-building essentials in one capsule

**DESICCATED LIVER** for all secondary antianemia principles of whole fresh liver

**FERROUS SULFATE** for ferrous iron, the most effective form of iron medication

**ASCORBIC ACID** to aid absorption and utilization of iron

**FOLIC ACID** to stimulate bone marrow and help in normal red blood cell development

1 or 2 Capsules t.i.d. • Bottles of 100 Capsules
Ferrous sulfate is "least likely of all iron preparations to produce gastric irritation..."

Albrecht, F. K.: Modern Management in Clinical Medicine, Baltimore, Williams and Wilkins Co., 1946.

In iron-deficiency anemia, iron, and iron alone, is specific. Feosol Tablets and Feosol Elixir contain adequate dosage of ferrous sulfate—grain for grain the most effective and, according to many investigators, the least irritating form of iron.

Smith, Kline & French Laboratories Philadelphia

Feosol Tablets Feosol Elixir

The standard forms of iron therapy

One of the most characteristic signs of spinal cord involvement in pernicious anemia is the loss of vibration sense. Early diagnosis and intensive, continuous treatment are vital in order to prevent spinal cord sclerosis. One of the chief causes of failure in pernicious anemia therapy has been the use of substandard liver preparations.

Liver preparations Armour

selected from the world’s largest supply of fresh raw material, preserve the blood regenerating active constituents of fresh liver. Remember, The Armour Laboratories has long been a pioneer in the preparation of therapeutic liver extracts.

Armour Liver Preparations
Liver Injection
2 U.S.P. Injectable Units per cc. (Crude.)
4 U.S.P. Injectable Units per cc.
Made from the unrefined 70% alcohol soluble fraction of liver extract in the manner described in the U.S.P. XIII for the preparation of Liver Injection (Crude).
Liver Injection 2 U.S.P. units (Crude) (Armour) is available in 10 and 30 cc. rubber-capped vials.
Liver Injection 4 U.S.P. units (Armour) is available in 5 and 10 cc. rubber-capped vials.
10 U.S.P. Injectable Units per cc. in 1 cc., 5 cc., 10 cc., and 50 cc. rubber-capped vials.
15 U.S.P. Injectable Units per cc. in 1 cc., 5 cc., and 10 cc. rubber-capped vials. A highly refined and concentrated preparation for massive dosage.

Solution Liver Extract — Oral
45 cc. equal 1 U.S.P. Oral Unit. A readily assimilable and therapeutically effective preparation for use when the oral route is indicated or preferred.

Liver Extract Concentrate — Capsules

Have confidence in the preparation you prescribe or administer — specify "ARMOUR"

ARMOUR Laboratories

HEADQUARTERS FOR MEDICINALS OF ANIMAL ORIGIN • CHICAGO 9, ILLINOIS
Logically
... You'll want to
eliminate outmoded technics and
equipment with
POUR-O-VAC SEALS
the modern, reusable hermetic closure
for sealing, storing, handling and con-
serving surgical fluids.

THESE FACTS ARE CONVINCING...

Pour-o-vac Seals eliminate the possibility
of sterile water contamination caused by
intake of bacteria-laden dust... avoids
contamination by unfiltered air.

They serve a secondary function of provid-
ing a dustproof seal for remaining fluid
when only the partial contents of a con-
tainer are used. Of importance, they are
interchangeable with all Fenwal 3000,
2000, 1000 and 500 ml containers.

In permitting contents to be stored for long
periods under vacuum... periodic testing
for sterility without breaking the hermetic
seal... pouring of contents from a non-
drip sterile lip, Pour-o-vac seals eliminate
the wasteful, time-consuming and ques-
tionably scientific method of sealing with
gauze, cotton, paper, string and tape.

ALSO INVESTIGATE—Fenwal Automatic
Washing Units, capable of accommodating and
thoroughly cleansing 4 containers in 30 seconds.

ORDER TODAY or write immediately for
further information.

MACALASTER BICKNELL COMPANY
243 Broadway Cambridge, Massachusetts
Retested ... Accurate ... Readable ... 
Kimble Blue Ring Yellow Backs are here!

KIMBLE GLASS ... foremost maker of precision laboratory glassware ... proudly presents this outstanding new line of retested, accurate, easily read thermometers. Every item in this new line is retested to insure its accuracy.

Precise! There is a Kimble Blue Ring Yellow Back Thermometer for each scientific specification—ASTM and other special-purpose thermometers—National Bureau of Standards thermometer specifications ... can be N.B.S. Certified if required.

High visibility! The yellow back behind the column and the new style horizontal numbering insure speediest and most accurate reading ... save your time and minimize possibility of error.

Look for the blue ring on top that instantly identifies genuine Kimble Yellow Backs.

If your laboratory supply dealer does not yet have Kimble Blue Ring Yellow Back Thermometers, write us for the names of the nearest dealers who have them.
Moduline, by Aloe, comes in architectural approved widths and depths so that custom-built laboratory facilities may be developed from standard Moduline units. Notice these details: concealed hinges; baked steel finishes with stainless steel table tops; Furnished with or without reagent shelves. Utilities can be top or splashback mounted. No working space is taken up with utilities. Each new installation is convincing more persons that Moduline is the most functional, practical, laboratory furniture ever designed. Write for special booklet T-300 and learn how Moduline can help solve your furniture problems.

Special schematic layouts for laboratories available on request.
Important advance in blood banking

BAXTER

"Fuso-Flo"

STOPPER

Since Baxter introduced the closed system, the Fuso-Flo stopper is the most important new step in making blood and plasma infusions trouble-free. This exclusive Baxter feature provides efficient preliminary straining, prior to filtration. It assures proper, uninterrupted flow regardless of condition or age of blood or plasma. Fuso-Flo is another example of continuing Baxter research and development in parenteral therapy. No other method is used in so many hospitals.
The E.&A.-Leiboff Urea Nitrogen Apparatus permits simultaneous digestion of one to six samples in 10 minutes—without the need of employing an autoclave.

The cast aluminum sample holder is provided with a combination thermometer shield and tube support at its center; it is furnished with a thermostatically-controlled Fisher Heater. With 2 Leiboff tubes.

$60.00

Thirteen urine samples for the Purdy and the Benedict tests—a total of 26—can be heated simultaneously in the Fisher Clinical Specimen Heater.

Standard size test tubes in the front row are heated only at the topmost inch for albumen testing; those in the rear row are base-heated for sugar determinations.

Fisher Clinical Specimen Heater, with thermostatically-controlled heating elements for 110 volt, A.C.

$30.00

To help you picture the constituents of Bēpron® Fortified

Because it's made from prime, edible beef liver — liver so palatable that fractionation is reduced to a minimum — Bēpron Fortified contains unusually high liver content. Into each fluidounce go 2 ounces of fresh liver. Also in each fluidounce — 3 gr. of a more palatable iron, Saccharated Ferrous Iron... 5 mg. folic acid...

2 mg. thiamine hydrochloride... 2 mg. riboflavin... 15 mg. niacinamide. Because it is so complete and so exceptionally palatable, you may want to prescribe Bēpron Fortified for patients with chronic or nutritional anemia.

Hematology in the Light of Sternal Puncture

BONE MARROW BIOPSY

By S. J. Leitner, M.D.,
University of Berne, Switzerland

English translation revised and edited by C. J. C. Britton, M.D., and E. Neumark, M.B.

This is not a mere translation of Leitner's famous book, but a new edition that includes the most recent material, made available, in part, by the original author and, in part, by the editors who aimed particularly at including the important American and English findings not contained in the German edition. Indispensable to hematologists, pathologists and internists, the book is intended for practical, clinical use. It discusses, however, general hematologic problems, because sternal marrow biopsy cannot be divorced from other investigations and clinical findings if it is to be fruitful in the elucidation of individual cases. Illustrative cases are quoted with short histories and a summary of the most important points is appended to each section.

CONTENTS

Technique of Sternal puncture, Cell Counts on the Sternal Marrow, Morphology of the Marrow Cells, Maturation Curves, Studies on Mitoses, Therapeutic Trials by Sternal Puncture, Disorders of Erythropoiesis, Disorders of Leucopoiesis, Disorders of Thrombopoiesis, Summary of Disorders of Maturation, Disorders of the Marrow Reticulum, Tumors, Sternal Marrow in Liver Disease, Disorders of Hemopoiesis in Endocrine Disorders, The Effects of Radium and X-rays on Bone Marrow, The Demonstration of Pathogens in Sternal Marrow, Metabolism of Marrow and Blood Cells, The Defense Reaction of Marrow Cells, Tissue Culture of Marrow Cells.

1949 • 443 pages • 193 illustrations • 6 color plates

bibliography • index • $8.00

Renal protection, so urgently needed in sulfonamide therapy, is ensured two ways by Citrasulfas® M . . .

1 It protectively contains two independently soluble sulfa drugs (sulfadiazine and sulfamerazine)

and also

2 protectively contains sodium citrate to increase urinary sulfonamide solubility

—a double guard against crystalluria.

for your

BLOOD TYPING
RH TESTING

you need the highest titre serum available.

THE VITAMINS
IN MEDICINE

SECOND EDITION

A third printing of the second edition of this famous handbook became necessary in 1948. It retains its position as the most comprehensive reference work prepared for clinicians.

It stresses diet and therapy; it explains the biochemical behavior of vitamins and their physiological functions. The more strictly chemical information is briefly set down.

You will find this a most useful book not the least because of its practical arrangement. Each vitamin is considered from the following points of view: history, chemistry, food sources, physiology, pharmacology, human requirements in health and disease, deficiency diseases, methods for detecting deficiencies and therapeutic uses.

928 pages  208 illustrations  bibliographies  index  $12.00

BROWN
Blood Grouping
and
Cross Matching
BOARD

- Embodies all the latest approved technics of blood grouping, Rh typing, Rh sensitivity testing and cross matching for transfusion.
- Simplifies and combines these technics in an orderly sequence.
- Minimizes the possibility of technical or clerical errors.
- Facilitates the grouping and cross matching of blood for emergency or routine use.
- Can be used for routine Rh typing and sensitivity testing in individual maternity cases.

The Brown Board was developed in the Duke University Hospital Blood Bank to increase efficiency and reduce errors in blood typing and cross matching. It consists of an etched and stamped metal plate on a hardwood base, with an Rh typing box, anti-serum bottle adapters, reagent bottles, test tubes, dropping pipettes and concavity slides for Rh typing.

Tubes and reagent bottles have in-the-glass labels in different colors, matching the labelling and coloring of their places in the board. Each reagent bottle and cross matching tube is of a different shape or size, so that it fits only in its proper place. Anti-serum bottle adapters hold any commercial anti-serum bottle; they are permanently marked, fit only in their own place in the Board and are colored to conform to the coloring recommended for the sera by the National Institute of Health. Reagent bottles and adapters are designed to permit one-hand removal and replacement of the dropping pipettes.

The Rh typing box is lighted, tiltable and designed to maintain a temperature of 37° to 42°C in the slide concavity where the blood sample is placed.

The Board has a slot to hold the Donor Card and Transfusion Request Form directly in front of the technician while tests are being made. A blotting paper holder is also provided, conveniently near the technician.

A-2800 Brown Blood Board, complete with Rh typing box, anti-serum bottle adapters, reagent bottles, test tubes, dropping pipettes and four-concavity slides. Each $90.00
BLOOD DILUTING PIPETTES
IN OUR STOCK FOR IMMEDIATE SHIPMENT

THOMA DILUTING PIPETTES. A.H.T. Co. Specification. These pipettes are provided with permanent calibration markings and are tested for accuracy at the 0.5 mark in addition to the 1 and 11, or the 1 and 101, marks. Each pipette is engraved with serial number for identification and is furnished with mouthpiece and ten inches of pure gum tubing of sufficiently heavy wall to resist collapse during suction. This length of tubing permits suction with the eye at a suitable and convenient distance to read the graduation marks during filling of the pipette without parallax error.

TRENNER DILUTING PIPETTES, with automatic capillary volume adjustment. The Trenner pipette utilizes surface tension in filled tubes of small bore, i.e. capillarity, for precise automatic adjustment of capillary volume and thereby provides extremely accurate control of dilution.

The Trenner diluting pipette in general use is made by blowing a bulb in a capillary tube, which procedure causes the capillary to widen or flare into a funnel shape at the point of its junction with the bulb, as shown in Fig. 1. The Trenner Diluting Pipette is made by fusing to a separately made bulb a piece of straight capillary tubing, the upper end of which terminates abruptly in a ground and polished surface at right angles to the longitudinal axis, as shown in Fig. 2.

The capillary volume of this piece of tubing is adjusted to be exactly 1/50th, 1/25th or 1/10th of the total volume content of the bulb of the pipette. This dispenses with the necessity for any engraving on the capillary tube since in use it is filled completely and there is need for only one graduation, i.e., that on the upper capillary, by which the dilution and total content of the pipette is controlled.

3390. Thoma Blood Diluting Pipette, A.H.T. Co. Specification, as above described, diluting 1 to 100 and 1 to 200; for red corpuscles with 10-inch rubber tubing and bone or glass mouthpiece ............ 1.60
3392. Thoma Blood Diluting Pipette, A.H.T. Co. Specification, as above described, diluting 1 to 10 and 1 to 20; for white corpuscles with 10-inch rubber tubing and bone or glass mouthpiece ....... 1.60
3394. Trenner Blood Diluting Pipette with automatic capillary volume adjustment, as above described, diluting 1 to 200; for red corpuscles with 10-inch rubber tubing and bone or glass mouthpiece ............ 2.65
3395. Trenner Diluting Pipette, with automatic capillary volume adjustment, as above described, diluting 1 to 10; for white corpuscles with 10-inch rubber tubing and bone or glass mouthpiece ............ 2.65
3395-B. Trenner Diluting Pipette, with automatic capillary volume adjustment, as above described, diluting 1 to 10; for dilution of cerebro-spinal fluid, of urine in counting pus cells, and of blood in the acid hematin method of hemoglobin determination. With 10-inch rubber tubing and bone—or glass—mouthpiece .......... 3.20
