For Rapid Response in Pernicious Anemia

The large doses of liver extract needed for rapid response in pernicious anemia can be injected in small volume with Campolon Forte, containing 15 U.S.P. units in 1 cc. The daily administration of 1 cc. by intramuscular injection often produces a dramatic response within three or four days. The average maintenance dose is 1 cc. every seven to fourteen days.

Ampuls of 1 cc., boxes of 3; vials of 5 cc. and 10 cc. (15 U.S.P. units in 1 cc.)

Campolon Forte

pipette washing can be as easy as this

No repeated handling of pipettes when you're using this efficient TECHNICON washer... they're gathered, cleansed, washed, and dried in the same basket. In three brief minutes, the TECHNICON Pipette Washer delivers a sparkling-clean basketload (200 at a time, 1 ml in 100th's... and it'll take them up to 18” long).

NOTE TO CONTRIBUTORS

Papers are accepted for publication on condition that they are contributed solely to this journal. Manuscripts must be typewritten, double or triple spaced, on good quality bond paper with at least one inch margins, the original copy and one duplicate submitted (figures and tables should also be submitted, if possible, in duplicate). References to literature should be made in conformance with American Medical Association usage. Tables should be as brief as possible. Charts and illustrations in black and white will be furnished without charge to the limit of four. A schedule of charges for excessive tables and figures is available on request. The excess in cost of colored illustrations must be borne by the contributors. If important changes in data are necessary on proof, a limited number are allowed without cost, but excessive alterations and additions must be charged to the contributors. University and hospital affiliations of each author, and an address for mailing proofs, should be submitted with the article.

Reprints of articles will be furnished to contributors when ordered in advance. An order form, showing cost of reprints, is sent with proofs. BLOOD—The Journal of Hematology is published monthly.

Correspondence concerning business matters should be addressed to Grune & Stratton, Inc., Medical Publishers, 381 4th Ave., New York 16, N. Y. All communications concerning editorial matters should be addressed to Dr. William Dameshek, 30 Bennet St., Boston 11, Mass.

Subscription rates, $12.00 per year within the United States; foreign, $13.00 per year; to Interns, Residents and Fellows within the United States, $5.00 per year. Single copies $2.00, foreign $4.50. May 1949 issue, $3.75.

Published monthly at Mount Royal & Guilford Avenues, Baltimore, Md. Entered as second-class matter January 2, 1916, at the Post Office at Baltimore, Maryland, under the Act of March 3, 1879.

SQUIBB MANUFACTURING CHEMISTS TO THE MEDICAL PROFESSION SINCE 1858
To help you picture the constituents of Bēpron® Fortified

Because it's made from prime, edible beef liver — liver so palatable that fractionation is reduced to a minimum — Bēpron Fortified contains unusually high liver content. Into each fluidounce go 2 ounces of fresh liver. Also in each fluidounce — 3 gr. of iron (Fe) in a palatable form. Saccharated Ferrous Iron... 5 mg. folic acid... 2 mg. thiamine hydrochloride... 2 mg. riboflavin... 15 mg. niacinamide. Because it is so complete and so exceptionally palatable, you will find Bēpron Fortified ideal for patients with chronic or nutritional anemia.

OPTIMUM ANTI-ANEMIA RESPONSE

VITAMIN B₁₂, isolated in the Merck Research Laboratories, is available as Cobione* (Crystalline Vitamin B₁₂ Merck). Cobione has been proved by clinical studies to exert high hematopoietic activity in the treatment of

★ PERNICIOUS ANEMIA (uncomplicated)
★ PERNICIOUS ANEMIA with neurologic complications
★ PERNICIOUS ANEMIA in patients sensitive to liver preparations
★ NUTRITIONAL MACROCYTIC ANEMIA due to Vitamin B₁₂ deficiency
★ MEGALOBLASTIC ANEMIA OF INFANCY (certain cases)
★ SPRUE (tropical and nontropical)

COBIONE:
- A crystalline compound of extremely high potency.
- Effective in extremely low doses, because of its high potency.
- May be administered subcutaneously or intramuscularly in precise dosage.
- No known toxicity in recommended dosages.
- Supplied in ampuls of 1 cc. of saline solution of Cobione, each cc. containing 15 micrograms of Crystalline Vitamin B₁₂.

*Cobione is the trade-mark of Merck & Co., Inc. for its brand of Crystalline Vitamin B₁₂.

Literture available on request.

MERCK & CO., Inc. Manufacturing Chemists RAHWAY, N. J.
a valuable aid

in postsurgical recovery

bibliography

A large percentage of patients enter surgery at a low plasma protein level, and the operative procedure makes further inroads on the already depleted protein reserves. A lowered protein level is unfavorable to recovery. It predisposes the patient to pulmonary edema and infection, retarded wound and fracture healing and impaired liver function. A high protein level is conducive to rapid healing. Since diets immediately following surgery are usually inadequate, protein digests given intravenously result in improved strength, appetite, and wound healing. Consequently, they greatly accelerate recovery.

2000 cc. of TRAVAMIN 5% a day will satisfy the protein requirements of a high percentage of surgical patients, 2000 to 4000 cc. a day are given according to requirements. TRAVAMIN is made from bovine plasma.

There's no substitute for EXAX RETESTED quality

EXAX RETESTED is America's No. 1 choice for accurate laboratory determinations simply because it is made and intended for that purpose. EXAX won't bounce, but it is thoroughly annealed for toughness . . . will stand everyday handling and usage.

The great value of EXAX RETESTED lies in certain exclusive advantages. It is a special formula of glass, precision-made by specialty craftsmen.

The fine deep graduations are of a type which readily accepts the permanent fused-in blue filler. And... all calibrations are marked and checked and retested with standards of highest precision.

So remember, if accuracy and fitness for the job are important, there is no substitute for EXAX RETESTED glassware.

Iron in adequate dosage

"is almost a physiological necessity in infancy
and childhood and [childbearing] women . . ."

and Feosol is iron in its most effective form

Feosol—both the Tablets and the highly palatable
Elixir—contains adequate dosage of ferrous sulfate,
grain for grain the most effective form of iron.
Feosol is easily absorbed and readily tolerated.
Feosol effects rapid hemoglobin regeneration
and prompt reticulocyte response.

Each Feosol Tablet contains 3 gr. ferrous sulfate excised;
each 2 fluid drams (2 teaspoonfuls) of Feosol Elixir supplies
5 gr. ferrous sulfate—approximately equivalent to 1 Feosol Tablet.

Smith, Kline & French Laboratories, Philadelphia

Laboratory Calgonite, cleaning compound.............1½ lb. box, $ .60
Impaired position sense (Brauch-Romberg symptom) is one of the more characteristic evidences of cord involvement in pernicious anemia.

Early, adequate and persistent therapy is essential for the prevention or control of spinal cord affection in pernicious anemia especially since neural involvement may cripple or incapacitate the patient. The quality of the liver preparation employed also becomes extremely important.

**Liver Preparations Armour** are carefully prepared to preserve the active blood regenerating constituents of the fresh liver—the hemopoietic principle as well as secondary factors. Finished products are tested for potency on actual pernicious anemia patients in relapse.

*Have confidence in the preparation you prescribe — specify "Armour"*

**Armour Liver Preparations — Liver Injection**

2 U. S. P. Injectable Units per cc. (Crude.)

4 U. S. P. Injectable Units per cc.

Made from the unrefined 70% alcohol soluble fraction of liver extract in the manner described in the U. S. P. XIII for the preparation of Liver Injection (Crude.)

Liver Injection 2 U. S. P. units (Armour) is available in 10 and 30 cc. rubber-capped vials.

Liver Injection 4 U. S. P. units (Armour) is available in 5 and 10 cc. rubber-capped vials.

10 U. S. P. Injectable Units per cc. in 1 cc., 5 cc., 10 cc., and 30 cc. rubber-capped vials.

15 U. S. P. Injectable units per cc. in 1 cc., 5 cc., and 10 cc. rubber-capped vials. A highly refined and concentrated preparation for massive dosage.

**Solution Liver Extract — Oral**

45 cc. equal 1 U. S. P. Oral Unit. A readily assimilable and therapeutically effective preparation for use when the oral route is indicated or preferred.

**Liver Extract Concentrate — Capsules**

These facts are convincing...

Pour-o-vac Seals eliminate the possibility of sterile water contamination caused by intake of bacteria-laden dust... avoids contamination by unfiltered air.

They serve a secondary function of providing a dustproof seal for remaining fluid when only the partial contents of a container are used. Of importance, they are interchangeable with all Fenwal 3000, 2000, 1000 and 500 ml. containers.

In permitting contents to be stored for long periods under vacuum... periodic testing for sterility without breaking the hermetic seal... pouring of contents from a non-drip sterile lip, Pour-o-vac seals eliminate the wasteful, time-consuming and questionably scientific method of sealing with gauze, cotton, paper, string and tape.

Also investigate—Fenwal Automatic Washing Units, capable of accommodating and thoroughly cleaning 4 containers in 30 seconds.

Order today or write immediately for further information.

CLINICAL CENTRIFUGES
Built to Withstand the Strain of Continuous Service!

WILL CORPORATION can give you prompt delivery on these much-in-demand INTERNATIONAL CENTRIFUGES. In hospital wards and small clinics, they’re ideal for average capacity work ... rugged in construction, compact, stable ... with heads that are removable and interchangeable! Get all the facts about these economical centrifuges and their wide variety of accessories.

Our popular 4709 international model. Its guard bowl of heavy cast aluminum insures long life, adequate protection.

4-place head is shaped for easy access to tubes. Convenient, time-saving.

Three flexible rubber feet provide stability, perfect cushioning. No need to screw centrifuge to table.

Rheostat control mounted in base sets conveniently to desired speed.

Clinical Atlas of Blood Diseases

A valuable guide for the general physician and the medical student. Each disease reproduced in highly magnified colored plates. . . opposite are included brief outlines of essential facts about them. Journal American Medical Association says, "Highly recommended . . . one of the most useful books on hematology.

48 Ilus., 45 in color, 138 pages, $5.00

STITT, CLOUGH and BRANHAM

Practical Bacteriology,
Hematology and Parasitology

This is a world famous book, now in its 10th edition. Up-to-date and valuable additions to material, including many new subjects and sections, have been contributed by specialists in their fields. For instance, the new method of preparing colloidal gold solutions now in use at the Naval Medical School Laboratories. There is a summary of the present status of antibiotics . . . and many other informative features. Many new illustrations.

765 Illus., 991 pages, $10.00

WHITBY and BRITTON

Disorders of the Blood

A thoroughly complete treatise on blood disorders, it presents diagnostic, pathology, treatment and details of technic for each disease. A notable feature is the colored plates of the diseases under study, chapters on origin and development of blood cells, hemolytic anemias, hemoglobinization and blood transfusion, and others have been materially expanded in this fifth edition. There are useful tables and diagrams, and an index of authors for quick reference. A valuable feature is the summary.

82 Ilus., 10 in color, 665 pages, $10.00

FIVE Anti-Rh Serums to test every blood—completely

More and more pathologists are making complete Rh determinations for blood infusion cases. They're turning to American for five potent serums—Anti-Rh₀ (Anti-D), Anti-Rh₉ (Anti-CD), Anti-Rh” (Anti-DE), Anti-ᵣh” (Anti-E) and Anti-Hr’ (Anti-c).

The slide method gives accurate, unmistakable readings in two minutes. No microscope is needed. Serums, prepared to N. I. H. specifications, may be used with fresh, clotted, oxalated, heparinized or citrated blood. They retain original potency over a long period even under adverse conditions. Six strategically located distributing centers assure you of prompt service.

WRITE today for descriptive literature on American's complete line of blood-typing and blood-grouping serums.

NEW PICTORIAL MONOGRAPH

THE SPLEEN AND HYPERSPLENISM

By WILLIAM DAMESHEK, M.D.
and SOLOMON ESTREN, M.D.
J. H. Pratt Diagnostic Hospital, Tufts College Medical School, Boston, Mass.

THIS PICTORIAL monograph is a masterful reproduction of the charts, photographs, and photomicrographs that made up the highly successful exhibits at the Centennial Convention of the A.M.A. (June 1947) and the New York Academy of Medicine (October 1947).

The first section is devoted to anatomy, histology, methods of study of splenic function, and physiology with emphasis upon function from the point of view of anatomy.

In the second section, the clinical syndromes of hypersplenism are presented in succession: hemolytic anemia, thrombocytopenia, neutropenia, pancytopenia. Etiology, classification, and pathology of hypersplenism are presented as well as the results of treatment. The concepts of "primary" and "secondary" hypersplenism are clarified. A scheme for the pathogenesis of hypersplenic states is given.

In the third section, various aspects of splenic disease are discussed: causes of splenomegaly, clinical approach to splenomegaly, myeloid metaplasia of the spleen, diagnosis of pancytopenia, indications and contraindications to splenectomy. The authors' concepts of the endocrine nature of hypersplenic syndromes is summarized.

55 plates, large size (9 x 12"), printed on one side only, in plastic binder $4.75

IT'S THE SPENCER
PHASE TURRET CONDENSER

TURRET DIAL ROTATES EASILY without danger of disturbing the microscope.
The ANNULAR DIAPHRAGMS (interchangeable) are brought into correct position without backlash.
INDIVIDUAL CENTERING OF ANNULAR DIAPHRAGMS permits parcentering to four different phase objectives. Therefore there is no need to center annular diaphragms when changing objectives.
CENTERABLE MOUNT permits accurate location of phase condenser in substage fork.
LONG FOCUS ANNULAR DIAPHRAGMS to fit turret condenser are available for micro manipulation and tissue cultures located up to 17mm above stage.

Please write for demonstration or catalog and chart of applications.

RAPID MICROCHEMICAL METHODS FOR BLOOD
AND CEREBROSPINAL FLUID EXAMINATIONS

Dr. F. Rappaport, formerly of the Institute for General and Experimental Pathology, Vienna, is Laboratory Director of the Biochemical and Serological Department of the Beillinson Hospital, Petach Tikwah, and the Hadassah Municipal Hospital, Tel Aviv.

Well known for his original contributions and exemplary work in the field of microanalysis, he states the objects of his book as follows:

- to simplify the laboratory procedures
- to decrease the amount of material needed for analysis
- to shorten the working time
- to increase the precision of the results
- to stabilize the solutions wherever possible
- to work with simple apparatus.

He describes his own methods as well as others, all of them tested thoroughly in his laboratory and found completely satisfactory. The presentation is clear, systematic and, above all, practical. The principle of each method is stated briefly, followed by reagents, procedure, calculation, and concluded with an example.

Contents:

Determination of the General and Physical Qualities of Blood; Blood Gas Analysis According to van Slyke; Determination of the Anions; Determination of the Kations; Determination of Non-Protein-Nitrogen and Its Fractions; Determination of Proteins and Protein-Fractions; Determination of Carbohydrates and Their Derivatives; Determination of Ketobodies and Polyvalent Alcohols; Fats and Lipids; Bile Pigments and Liver-Function Tests; Enzymes; Vitamins; Sulfon Drugs and Para-Amino-Benzoic Acid; Solutions and Apparatus.

BROWN
Blood Grouping
and
Cross Matching BOARD

- Embodies all the latest approved technics of blood grouping, Rh typing, Rh sensitivity testing and cross matching for transfusion.
- Simplifies and combines these technics in an orderly sequence.
- Minimizes the possibility of technical or clerical errors.
- Facilitates the grouping and cross matching of blood for emergency or routine use.
- Can be used for routine Rh typing and sensitivity testing in individual maternity cases.

The Brown Board was developed in the Duke University Hospital Blood Bank to increase efficiency and reduce errors in blood typing and cross matching. It consists of an etched and stamped metal plate on a hardwood base, with an Rh typing box, anti-serum bottle adapters, reagent bottles, test tubes, dropping pipettes and concavity slides for Rh typing.

Tubes and reagent bottles have in-the-glass labels in different colors, matching the labelling and coloring of their places in the board. Each reagent bottle and cross matching tube is of a different shape or size, so that it fits only in its proper place. Anti-serum bottle adapters hold any commercial anti-serum bottle; they are permanently marked, fit only in their own place in the Board and are colored to conform to the coloring recommended for the sera by the National Institute of Health. Reagent bottles and adapters are designed to permit one-hand removal and replacement of the dropping pipettes.

The Rh typing box is lighted, tiltable and designed to maintain a temperature of 37°C to 42°C in the slide concavity where the blood sample is placed.

The Board has a slot to hold the Donor Card and Transfusion Request Form directly in front of the technician while tests are being made. A blotting paper holder is also provided, conveniently near the technician.

A-2800 Brown Blood Board, complete with Rh typing box, anti-serum bottle adapters, reagent bottles, test tubes, dropping pipettes and four-concavity slides. Each $90.00

CONDUCTIVITY OUTFIT. Sunderman Direct Reading Type. A.H.T. Co. Specification.
For rapid routine determinations of the electrometric conductivity of small quantities of biological fluids, and particularly for the measurement of serum total base and the estimation of serum sodium. Tests can be made with only 1.5 ml of sample.

The bridge is an improved, direct reading model of that originally described by F. William Sunderman, American Journal of Clinical Pathology, Vol. 19, No. 7 (July, 1949), p. 659. It is of the Wheatstone type, with direct reading dial graduated 3 to 21 in 0.1 divisions, indicating specific conductance expressed as mhos (reciprocal ohms) × 10^4 at 25°C. It is furnished with temperature cell constant compensators and “magic eye” null point indicator, and is entirely self-contained, requiring only the connection of the conductivity cell.

The Conductivity Cell, pipette form, is convenient for the collection of samples from small-mouthed vessels and for subsequent recovery of the sample for further tests. Each cell is individually calibrated and permanently marked with cell constant.

4031. Conductivity Outfit, Sunderman Direct Reading Type, consisting of Conductivity Bridge and Conductivity Cell, as above described, Water Bath 2-1/2 × 4-3/4 × 6 inches, Thermometer Holder of Stainless steel, and Thermometer 0 to 40°C in 0.2° divisions. Complete with directions for use and author’s nomogram for calculating serum total base, 5 ft. cord and plug. For 115 volts, 50 or 60 cycles, a.c. 149.00
