The large doses of liver extract needed for rapid response in pernicious anemia can be injected in small volume with Campolon Forte, containing 15 U. S. P. units in 1 cc. The daily administration of 1 cc. by intramuscular injection often produces a dramatic response within three or four days. The average maintenance dose is 1 cc. every seven to fourteen days.

Ampuls of 1 cc., boxes of 3; vials of 5 cc. and 10 cc.
(15 U. S. P. units in 1 cc.)

...in cancer case study

The high-pressure mercury arc of the Scopicon is the brightest light source ever employed for microprojection. The focal spot employed is roughly 1 mm. square: its pinpoint character permits flickerless projection of crisply detailed images up to ten feet across even under oil-immersed microscope objectives. The white color exhibits the various biological stains to splendid advantage. May we send you the brochure describing this versatile new instrument?

MASS DEMONSTRATIONS IN THE AUDITORIUM

The projectionist can follow a specimen through a progressive series of ever-closer localizations, from its gross aspect to its ultimate microscopic demonstration under oil-immersed objectives.
NOTE TO CONTRIBUTORS

PAPERS are accepted for publication on condition that they are contributed solely to this journal. Manuscripts must be typewritten, double or triple spaced, on good quality bond paper with at least one inch margins, and the original copy submitted in English. References to literature should be made in conformance with American Medical Association usage. Tables should be as brief as possible. Charts and illustrations in black and white will be furnished without charge to the limit of four. A schedule of charges for excessive tables and figures is available on request. The excess in cost of colored illustrations must be borne by the contributors. If important changes in data are necessary on proof, a limited number are allowed without cost, but excessive alterations and additions must be charged to the contributors. University and hospital affiliations of each author, and an address for mailing proofs, should be submitted with the article.

Reprints of articles will be furnished to contributors when ordered in advance. An order form, showing cost of reprints, is sent with proofs. BLOOD—The Journal of Hematology is published monthly.

Correspondence concerning business matters should be addressed to Grune & Stratton, Inc., Medical Publishers, 381 4th Ave., New York 16, N. Y. All communications concerning editorial matters should be addressed to Dr. William Dameshek, 30 Bennet St., Boston 11, Mass.

Subscription rates, $12.00 per year within the United States; foreign, $13.00 per year; to holders of Internships, Residentships and Fellowships within the United States, $9.00 per year. Single copies $2.00, foreign $2.50.

Published monthly at Mount Royal & Guilford Avenues, Baltimore, Md. Entered as second-class matter January 2, 1946, at the Post Office at Baltimore, Maryland, under the Act of March 3, 1879.

PAPERS TO APPEAR IN EARLY ISSUES

The May BLOOD will be a Special Issue of about 250 pages, dealing with "Blood Cells and Their Reactions." Space does not allow a listing here of all the approximately twenty-five papers which it will contain. The Special Issue will be mailed without additional cost to all regular subscribers, and is available to non-subscribers at the price of $3.75.

Antipernicious Anemia Factor of Liver...Now Available in Pure, Crystalline Form

Vitamin B₁₂, recently isolated in the Merck Research Laboratories, now is available. Cobione* (Crystalline Vitamin B₁₂ Merck) has been proved by clinical studies to exert high hematopoietic activity in the treatment of

★ PERNICIOUS ANEMIA
★ NUTRITIONAL MACROCYTIC ANEMIA
★ SPRUE (tropical and nontropical)

COBIONE IS
- A pure, crystalline compound of extremely high potency.
- Effective in the treatment of pernicious anemia, including the neurologic complications.
- Effective in, and well tolerated by, patients sensitive to all liver preparations.
- Effective in extremely low doses, because of its high potency.
- May be administered parenterally in precise dosage, because it is a pure, crystalline compound.
- No known toxicity in recommended dosages.

*Literature is available on request.

*Cobione is the trade mark of Merck & Co., Inc. for its brand of Crystalline Vitamin B₁₂.

A special protective coating of fatty esters prevents oxidation of the ferrous sulfate to the relatively ineffective ferric form.

1. Outer coating
2. Under coating
3. Protective fatty esters
4. Compressed ferrous sulfate
A comprehensive study of 72 phase microscope applications, based on extensive research in cooperation with some of the nation's leading scientists, discloses—

**IN 41 DIFFERENT APPLICATIONS** Bright Contrast Objectives, in either low, medium, or high, give best results.

(AVAILABLE FROM AO ONLY)

**IN 10 DIFFERENT APPLICATIONS** Dark Contrast, Medium Objectives give best results.

(AVAILABLE FROM AO AND OTHERS)

**IN 9 DIFFERENT APPLICATIONS** B Minus Contrast Objectives, in either low, medium, or high, give best results.

(AVAILABLE FROM AO ONLY)

**IN 2 DIFFERENT APPLICATIONS** Dark Contrast, Low Objectives give best results.

(AVAILABLE FROM AO ONLY)

**IN 10 DIFFERENT APPLICATIONS** Bright or Dark Contrast give equally good results.

Here is up-to-the-minute evidence of the need for a wide variety of objectives to cover the many known applications for Phase Microscopy. The American Optical Company, *alone in the world today*, offers this variety from regular production. That is why there are many materials in which significant details can be seen only with Spencer Phase Microscopes. They are the logical choice for your laboratory.

BLOOD FOR TRANSFUSION
from KNICKERBOCKER BLOOD BANK

SPECIFICATIONS:

$15.00 per pint
Over 500 cc blood in ACD
Less than one week old
All blood groups and Rh types
Rh negatives tested with Rho-Rh'Rh
Attached pilot tube for cross matching
Labelled with control number, serologic data, date drawn, expiration date, blood group and Rh type
Meets specifications of The New York City and New York State Department of Health
U.S. Government License #164
Now serving many hospitals throughout the country. References supplied.
Guaranteed to arrive in perfect condition ready to transfuse

Please send me complete information regarding your Blood Bank Service.

short infusion time...

MEANS
more rest time...
earlier ambulation...

The high rate of infusion possible with Protein Hydrolysate, BAXTER, provides total daily protein requirements in from two to four hours. This leaves a good portion of the day for rest and recuperation, enabling the patient to benefit from early ambulation. This is another example of the benefits of the BAXTER program, which provides the specific solution, the exact equipment for any parenteral requirement.

WRITE for booklet giving full information.

Teaching cells to remember

The complex protein pattern depicted above—PUROGENATED® toxoid proteins—possesses the power to "teach" cells to produce specific antibodies for this one protein and also to "remember" this stimulus so well that reinjection of the same proteins will cause an instant outpouring of specific antibodies. A score of years may have elapsed, but the defensive mechanism of the body will always "remember" how to duplicate this reaction.

Lederle is the largest producer of biological products in the world and has led the field in immunization research for almost half a century. The modification of diphtheria and tetanus toxoids mentioned above is but one of many methods of refinement which Lederle has sponsored. Toxoids refined by this alcohol-fractionation method present a high antigenic potency, produce little or no reaction in the patient, and from them approximately 99.7% of the nonantigenic nitrogen has been removed.

TRI-IMMUNOL® DIPHTHERIA-TETANUS TOXOIDS, Alum-Precipitated, and PERTUSSIS VACCINE, COMBINED Lederle
1 immunization—1 vial of 1.5 cc.
5 immunizations—1 vial of 7.5 cc.

THIRD EDITION

An Introduction to Biochemistry

By W. R. FEARON, M.A., Sc.D.
Professor of Biochemistry, University of Dublin

"Admirable book... Compels contemplation, comment, even argument. Written with the utmost clarity, simplified to the ultimate possible point, illuminated with philosophical reflections, showing a willingness to make use of criticism—such are a few of the qualities of what still remains the best general textbook in biochemistry in the English language."—British Medical Journal

579 pages, bibliographies, index  $6.00

GRUNE & STRATTON
Medical Publishers, New York
There is lots of prime, edible beef liver in Bēpron® Fortified. Each fluidounce of Bēpron Fortified contains the total soluble constituents of 2 ounces of fresh beef liver—crude, unfractionated, yet palatable. Also in each fluidounce: 3 grains palatable Saccharated Ferrous Iron—equivalent to about 10 grains Dried Ferrous Sulphate, U.S.P. . . . 5 mg. folic acid . . . 2 mg. thiamine hydrochloride . . . 2 mg. riboflavin . . . 15 mg. niacinamide. Because it’s rich in liver, palatable, complete, consider Bēpron Fortified for patients with chronic or nutritional anemias. Wyeth, Philadelphia, Pa.
for making red blood cells

Liver-stomach concentrate
iron
vitamin B complex

... these are known raw materials for erythrocyte formation.

All are contained in Pulvules 'Lextron F.G.' (Liver-Stomach Concentrate with Ferrous Gluconate and Vitamin B Complex, Lilly). "F.G." refers to ferrous gluconate, a well-tolerated iron salt preferred by many clinicians. Pulvules 'Lextron F.G.' prescribed according to individual requirements provide the essential materials for the treatment of those anemias which respond to liver or iron therapy. Available in bottles of 84 or 500.
