AUTOMATIC PLATELET
AGGREGOMETERS®

SINGLE AND DUAL CHANNEL
- Automatic Calibration
- Automatic PRP and PPP Baseline Set
- Single Push-Button Operation
- Full scale range for platelet counts as low as 30,000
- Accurate Temperature Control and Display
- Heater Wells for Sample Incubation
- Variable Speed Stirring Option

Also available, the LUMI AGGREGOMETER® for simultaneously measuring and recording both platelet aggregation and ATP secretion in the same sample of PRP.

Call or write for additional information.

Progress in Hematology
Volume XI
Edited by ELMER B. BROWN

CONTENTS:
E. B. Brown, Introduction.
L. B. Vogler et al., Human Lymphocyte Subpopulations.
T. J. Sullivan, The Role of Eosinophils in Inflammatory Reactions.
O. M. Garson, Chromosome-Banding Techniques and Their Implication in Hematology.
J. Kouits et al., Factor VIII Physiology and Pathology in Man.
J. W. Halliday and L. W. Powell, Serum Ferritin and Isoferritins in Clinical Medicine.

1979, 336 pp., $34.50 ISBN: 0-8089-1223-2

Future volumes in PROGRESS IN HEMATOLOGY are now available on a Continuation Order basis. Your Continuation Order authorizes us to ship and bill each future volume in the series automatically, immediately upon publication. This order will remain in effect until cancelled.

Send payment with order and save postage and handling charge.

Prices are subject to change without notice.
### Factor Deficient Human Plasma

- **Substrate Quality**
- **Fresh Frozen**
- **Stable**
- **Mono-Specific**

*Coagulation Deficiency*

- All shipments are packed with dry ice in styrofoam boxes. (Handling Charge for orders under $200.00).
- Shipments within the United States are delivered within 24 hours.
- Plasma can be aliquoted to smaller amounts (1, 2, 3, 4 ml) at an additional charge of $.50 per vial.
- Special discount prices upon request for standing orders or large volumes.

*Also available— FACTORS I, II, V, IX, X, XIII • FACTORS VIII or IX with inhibitor*

**Fletcher Trait • Von Willebrand • Passavoy Trait • Fitzgerald Trait**

**Normal Reference Human Plasma**

Are you looking for better quality control in the Hemostasis Lab?

Coagulation ARP is the answer.

Coagulation ARP is a lyophilized pool of normal human plasma that has been stabilized and assayed for 14 parameters. Over 1000 determinations on each lot insure established values.

Accurate factor assays depend on the use of a stable and reproducible reference plasma to establish the standard curve.

If you perform just the routine screening tests or run a complete Hemostasis Lab, ARP should be a part of your quality control program.

To receive more information and a copy of our new Hemostasis Wall Chart, call toll free 1-800-231-5663; in Texas 1-800-392-3126.

Cat. No.: 5185 Price: $35.00 10 x 1.0 mL vials per package

Helena Laboratories
Beaumont, Texas
Only SICKLEQUIK® detects both sickle cell trait and anemia in one tube... one reading.

The simplest screening procedure for hemoglobin S

**Easy to Use:** Simply add 0.1 ml blood to ready-to-use reaction tube. Shake and let stand 5 minutes. Centrifuge 5 minutes and read.

**Easy to Read:** Observe color of interface and bottom layer to distinguish between normal (AA), anemia (SS) and trait (AS).

**Accurate:** In 200 tests, SICKLEQUIK demonstrated 100% agreement with reference method.1,2 Unlike tests based on turbidity, SICKLEQUIK showed no false negative or false positive reactions in 995 patient samples tested.3

**Economical:** SICKLEQUIK prepared reaction tubes are ready to use and stable. No reconstitution of reagents and long shelf life mean less waste.

For further details regarding test procedure and limitations, please refer to the package insert.

Prod. No. 33375 Box of 25 vials (25 tests)
Prod. No. 33376 Box of 100 vials (100 tests)
