ANNOUNCEMENTS

ADVANCES IN LEUKEMIA AND LYMPHOMAS
First Leukemia Society of America National Symposium
March 14–16, 1985
MGM Grand Hotel, Reno, Nevada

Fees: in advance, $125 ($50 for students); on site, $150 and $65. A forum for all multi-disciplines related to leukemia and lymphoma to bridge the gap from benchwork to practice and treatment at the bedside. Keynote speaker: Dr Jean Bernard, Paris, 1985 de Villiers Award recipient. There will be a plenary session, workshops, and posters. For additional details, contact LSA Medical Conference, c/o Bostrom Corporation, 435 N Michigan Ave, Suite 1717, Chicago, IL 60611.

WILMOT CANCER RESEARCH FELLOWSHIPS

The University of Rochester School of Medicine offers research training to physicians who have completed at least one year of residency or research experience. Fellowships will begin July 1, 1986. Opportunities exist in any discipline relevant to the cause, diagnosis, treatment, or prevention of cancer, including endocrinology, experimental therapeutics, genetics, hematology, immunology, microbiology, molecular and cellular biology, pathology, and radiation oncology. Beginning stipends range from $27,000 to $30,000, based on postgraduate experience. There is an annual allowance of $5,000 for related research costs. Support is provided for up to three years. For further information, contact Wilmot Cancer Research Fellowship Program, Medical Center Box 601, University of Rochester School of Medicine & Dentistry, 601 Elmwood Ave, Rochester, NY 14642.

R.W. RUNDLES INTERNATIONAL SYMPOSIUM ON HAIRY CELL LEUKEMIA
AND CHRONIC LYMPHOCYTIC LEUKEMIA
April 9–10, 1985
Searle Center
Duke University Medical Center
Durham, NC

The Symposium's international faculty will present a comprehensive overview of the most recent advances in basic research and clinical application for both diseases. Fourteen CME credit hours in Category I are offered. For information and brochure, contact Andrew T. Huang, MD, Box 3942 D.U.M.C., Durham, NC 27710. Telephone: (919) 684–3127.

NEW CANCER TREATMENTS:
INFUSIONAL CHEMOTHERAPY AND BONE MARROW TRANSPLANTATION
March 7–8, 1985

Directed by Drs Murray M. Bern and Jacob J. Lokich of the New England Deaconess Hospital.
This course is divided into two sessions. The infusional chemotherapy session addresses hepatic artery infusion, including technical aspects, with the goal of establishing the present status of hepatic arterial infusion in cancer management. The second day brings together the leaders in the field of bone marrow transplantation to describe the techniques and applications of allogenic and autologous bone marrow transplantation for hematologic malignancies and their emerging application for treatment of resistant solid tumors such as colon cancer, melanoma, and lung cancer.
For more information, please contact Gwen Schuster, Department of Continuing Education, Harvard Medical School, Boston, MA. Telephone: (617) 732-1525.
SECOND INTERNATIONAL SYMPOSIUM ON
"DETECTION AND TREATMENT OF MINIMAL
RESIDUAL DISEASE IN ACUTE LEUKEMIA"

November 6, 7 and 8, 1985
Congress Center "De Doelen," Rotterdam, The Netherlands

Organizers: Anton Hagenbeek, M.D., Ph.D. and Bob Löwenberg, M.D., Ph.D.
The Dr. Daniel den Hoed Cancer Center/Rotterdam Radio-Therapeutic Institute.

This symposium is focused on the detection and treatment of subclinical disease in acute leukemia.

The topics to be discussed are:
• New methods to detect residual leukemia (genetic methodologies, cell culture techniques, monoclonal antibodies) and their integration into clinical management.
• The value of new chemotherapy programs.
• Recent accomplishments in clinical bone marrow transplantation (including T-cell depletion; mismatched BMT; autologous BMT with elimination of leukemic cells from the graft; BMT results beyond 5 years).

In order to register and to obtain an abstract form, write to J.W. van der Velden, M.D. c/o Organizing Committee Leukemia Symposium, The Dr. Daniel den Hoed Cancer Center, P.O. Box 5201, 3008 AE ROTTERDAM, The Netherlands. The deadline for receiving abstracts is August 15, 1985.
Essential reading
for the hematologist...

PROGRESS IN
HEMATOLOGY

VOLUME XIII
Edited by ELMER B. BROWN, M.D.

For more than 25 years, Progress in Hematology has provided hematologists with comprehensive reviews of important clinical and research topics in the field. Volume XIII continues that tradition of excellence, examining recent developments in such areas as sickle cell anemia, the measurement of platelet-bound immunoglobulins, platelet-derived growth factor, and inherited platelet disorders.

1983, 368 pp., $47.50

SCRIPPS CLINIC AND RESEARCH FOUNDATION
NIH Research Fellowships in Hematology

Opportunities are provided for basic or clinical research in a variety of disciplines. Fellows will be participating in ongoing independently funded research programs and will work closely with an experienced preceptor.

Term: Fellowships are for one to four years.
Requirements: M.D., Ph.D. or equivalent. U.S. citizenship or permanent resident alien status.
Salaries: $16,000 - $30,000 according to NIH scale.
Inquiries: Dr. Ernest Beutler, Chairman, Department of Basic and Clinical Research, Scripps Clinic and Research Foundation, 10666 North Torrey Pines Road, La Jolla, California (USA) 92037.
Research Programs: Platelet kinetics, function, and biochemistry; Coagulation; Hemostasis; Thrombosis; Fibrinolysis; Red cell enzymology, biochemistry and genetics; Immunohematology; Molecular Biology; Oncologic Pharmacology; Bone Marrow Transplantation.
Coagulation Factor Deficient Human Plasma

- Substrate Quality
- Fresh Frozen
- Stable
- Mono-Specific

COAGULATION DEFICIENCIES AVAILABLE:

Factor I (Afbirinogenemia)  Factor IX  VonWillebrand Trait
Factor II  Factor X  (Mild and Severe)
Factor V  Factor XI  Prekallikrein
Factor VII  Factor XII  Kininogen (HMW)
Factor VIII  Factor XIII  Passovoy Trait
Factor VIII Inhibitor

HEMATOLOGY PRODUCTS AVAILABLE:

Pooled Normal Plasma  Aged Serum
Assayed Normal Plasma  Adsorbed Plasma
Platelet Free Plasma  Coumadinized Plasma

- Plasmas are fresh frozen, citrated plasmas drawn from carefully screened HUMAN donors with congenital coagulation factor deficiencies.
- Shipments are packed in dry ice and usually delivered within 24 hours.
- Special arrangements are made to ship plasma in required volumes in vials (0.5 to 5.0 ml), in bags or on standing orders.

SEMINARS IN ONCOLOGY

JOHN W. YARBRO, M.D., Ph.D.,
Editor-in-Chief

RICHARD S. BORNSTEIN, M.D. and MICHAEL MASTRANGELO, M.D.
Associate Editors

Seminars in Oncology provides the oncologist with a thorough review of important topics in the field. Each issue is devoted to an area of particular importance in which invited experts discuss a wealth of clinical experience. All practicing oncologists will find Seminars to be an outstanding source of current and reliable information.

SCHEDULED TOPICS FOR VOLUME 12, 1985 AND VOLUME 13, 1986
GASTRIC CANCER
TUMOR CELL HETEROGENEITY
ACUTE LEUKEMIA IN CHILDHOOD
PALLIATIVE CARE
MYELOMA
BRAIN TUMORS
Volume 12, 1985
Published quarterly; approx. 440 pages per year
Annual subscriptions, U.S.A. and Canada: $54.00 individuals/$89.00 institutional
(Outside the U.S.A. and Canada: $77.00)
ISBN: 0093-7754

Journal subscriptions are for the calendar year and are payable in advance. Price includes postage, handling, and air freight where applicable. Prices are in U.S. dollars and are subject to change without notice.

Individuals may request information regarding personal subscription rates. Please direct all orders and inquiries to the Journal Subscription Fulfillment Department.

Meet a new level of sophistication for hematology analysis. It's the Sysmex CC-800 with PDA-410 and the IBM PC. The beauty of the CC-800 System can be summed up in two simple statements.

**Smart.**

Intelligence is the core of the CC-800 System.

From one sample you get incredibly comprehensive analysis, including WBC, RBC, and Pt histograms, along with 23 parameter output. Every sample can be monitored through any of three quality control programs, including Bull's Moving Average, Hoffman's Average of Normals, and Delta Check. Control blood is monitored via a Control Data Program with 6 tri-level files. All Q.C. programs include CRT display and print out of Levey Jennings Charts.

The CC-800 System even includes the ability to enter patient demographics, run summary reports, and use a maintenance file.

**Never mind.**

The CC-800 System works hard to eliminate the common problems that reduce productivity. An autosampler turntable mixes, aspirates, dilutes, and analyzes 100 samples in one easy operation. Simply load, "start," and walk away. Sample results are automatically stored in memory for future reference.

If the analyzer detects an abnormality, a recount is initiated automatically. Or, an audible alarm will sound for tech assistance. And, most other routine problems are eliminated thanks to low maintenance requirements, quick start-up/shutdown, and automatic calibration.

The CC-800 System from Sysmex is supported by American Scientific Products' extensive nationwide service network and includes reagents and controls.

For more information on the CC-800 System, contact your local American S/P representative, or write: American Scientific Products, 1430 Waukegan Road, McGaw Park, IL 60085. Telephone 312/689-8410.
